IN THE UNITED STATES COURT OF APPEALS
FOR THE DISTRICT OF COLUMBIA CIRCUIT

GRAYSCALE INVESTMENTS, LLC,

Petitioner,

v.

SECURITIES AND EXCHANGE
COMMISSION,

Respondent.

Case No. 22-1142

UNDERLYING DECISION FROM WHICH PETITION ARISES

Pursuant to this Court’s Order dated July 1, 2022, Petitioner Grayscale Investments, LLC submits the attached copy of the underlying order from which this petition for review arises.
Dated: August 1, 2022

Respectfully submitted,

/s/ Donald B. Verrilli, Jr.

Attorneys for Petitioner
Market Makers a $0.40 per contract rebate when adding liquidity in VOLQ does not impose an undue burden on competition. Maker Makers take on a number of obligations,\(^{39}\) including quoting obligations,\(^{40}\) unlike other market participants. Further, the proposed pricing for Lead Market Makers and Market Makers in VOLQ is intended to incentivize them to quote and trade more on the Exchange, thereby providing more trading opportunities for all market participants. As noted above, the $0.40 per contract rebate when adding liquidity in VOLQ is intended to offset the $0.40 per contract VOLQ transaction fee. The Exchange believes the proposed pricing will incentivize Lead Market Makers and Market Makers to provide liquidity in the new product. Additionally, the proposed VOLQ rebate will be applied equally to all Lead Market Makers and Market Makers.

C. Self-Regulatory Organization’s Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

No written comments were either solicited or received.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The foregoing rule change has become effective pursuant to Section 19(b)(3)(A)(ii) of the Act.\(^{41}\) At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is: (i) necessary or appropriate in the public interest; (ii) for the protection of investors; or (iii) otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission shall institute proceedings to determine whether the proposed rule change should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission’s internet comment form (http://www.sec.gov/rules/sro.shtml); or
- Send an email to rule-comments@sec.gov. Please include File Number SR–Phlx–2022–27 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549–1090.

All submissions should refer to File Number SR–Phlx–2022–27. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission’s internet website (http://www.sec.gov/rules/sro.shtml). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for website viewing and printing in the Commission’s Public Reference Room, 100 F Street NE, Washington, DC 20549 on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of the filing also will be available for inspection and copying at the principal office of the Exchange. All comments received will be posted without change. Persons submitting comments are cautioned that we do not redact or edit personal identifying information from comment submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR–Phlx–2022–27, and should be submitted on or before July 27, 2022.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.\(^{42}\)

Jill M. Peterson,
Assistant Secretary.

SECURITIES AND EXCHANGE COMMISSION

Self-Regulatory Organizations; NYSE Arca, Inc.; Order Disapproving a Proposed Rule Change, as Modified by Amendment No. 1, to List and Trade Shares of Grayscale Bitcoin Trust Under NYSE Arca Rule 8.201–E (Commodity-Based Trust Shares)

June 29, 2022.

I. Introduction

On October 19, 2021, NYSE Arca, Inc. (“NYSE Arca” or “Exchange”) filed with the Securities and Exchange Commission (“Commission”), pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (“Exchange Act”)\(^{1}\) and Rule 19b–4 thereunder,\(^{2}\) a proposed rule change to list and trade shares (“Shares”) of Grayscale Bitcoin Trust (“Trust”) under NYSE Arca Rule 8.201–E (Commodity-Based Trust Shares). The proposed rule change was published for comment in the Federal Register on November 8, 2021.\(^{3}\)

On December 15, 2021, pursuant to Section 19(b)(2) of the Exchange Act,\(^{4}\) the Commission designated a longer period within which to approve the proposed rule change, disapprove the proposed rule change, or institute proceedings to determine whether to disapprove the proposed rule change.\(^{5}\) On February 4, 2022, the Commission instituted proceedings under Section 19(b)(2)(B) of the Exchange Act\(^ {6}\) to determine whether to approve or disapprove the proposed rule change.\(^{7}\) On April 21, 2022, the Exchange filed Amendment No. 1, which replaced and superseded the proposed rule change in its entirety, and on May 4, 2022, the Commission provided notice of Amendment No. 1 to the proposed rule change and designated a longer period for Commission action on the proposed rule change, as modified by Amendment No. 1.\(^{8}\)

Continued
This order disapproves the proposed rule change, as modified by Amendment No. 1. The Commission concludes that NYSE Arca has not met its burden under the Exchange Act and the Commission’s Rules of Practice to demonstrate that its proposal is consistent with the requirements of Exchange Act Section 6(b)(5), which requires, in relevant part, that the rules of a national securities exchange be “designed to prevent fraudulent and manipulative acts and practices” and “to protect investors and the public interest.”

When considering whether NYSE Arca’s proposal to list and trade the Shares is designed to prevent fraudulent and manipulative acts and practices, the Commission applies the same analytical framework used in its orders considering previous proposals to list bitcoin 10-based commodity trusts and bitcoin-based trust issued receipts to assess whether a listing exchange of an exchange-traded product (“ETP”) can meet its obligations under Exchange Act Section 6(b)(5). 11 As the Commission has explained, an exchange that lists bitcoin-based ETPs 12 can meet its obligations under Exchange Act Section 6(b)(5) by demonstrating that the exchange has a comprehensive surveillance-sharing agreement with a regulated market of significant size related to the underlying or reference bitcoin assets. 13

In this context, the terms “significant market” and “market of significant size” include a market (or group of markets) as to which (a) there is a reasonable likelihood that a person attempting to manipulate the ETP would also have to trade on that market to successfully manipulate the ETP, so that a surveillance-sharing agreement would assist in detecting and deterring misconduct, and (b) it is unlikely that trading in the ETF would be the predominant influence on prices in that market. 14 A surveillance-sharing agreement must be entered into with a “significant market” to assist in detecting and deterring manipulation of the ETF, because a person attempting to manipulate the ETF is reasonably likely to also engage in trading activity on that “significant market” as well.

Although surveillance-sharing agreements are not the exclusive means by which a listing exchange of a commodity-trust ETP can meet its obligations under Exchange Act Section 6(b)(5), such agreements have previously provided the basis for the exchanges that list commodity-trust ETFs to meet those obligations, and the Commission has historically recognized their importance. And where, as here, a listing exchange fails to establish that other means to prevent fraudulent and manipulative acts and practices will be sufficient, the listing exchange must enter into a surveillance-sharing agreement with a regulated market of significant size because such agreements detect and deter fraudulent and manipulative activity. 16

12 As used in this order, the term “ETPs” refers to open-end investment companies for the offer and sale of their shares under the Securities Act of 1933 (“Securities Act”) and are regulated as investment companies under the Investment Company Act of 1940 (“1940 Act”). The term “ETPs” refers to exchange-traded products that register the offer and sale of their shares under the Securities Act but are not regulated under the 1940 Act, such as commodity trusts and trust issued receipts. Commenters have sometimes used these terms interchangeably, and it is not always clear which type of product a commenter is referring to. Accordingly, unless clear from the context, the Commission interprets statements from the Exchange or a commenter to refer to an ETP.

16 See Amendment to Rule Filing Requirements for Self-Regulatory Organizations Regarding New Derivative Securities Products, Securities Exchange
The Commission has long recognized that surveillance-sharing agreements “provide a necessary deterrent to manipulation because they facilitate the availability of information needed to fully investigate a manipulation if it were to occur” and thus “enable the Commission to continue to effectively protect investors and promote the public interest.”

As the Commission has emphasized, it is essential for an exchange listing a derivative securities product to have the ability that surveillance-sharing agreements provide to obtain information necessary to detect, investigate, and deter fraud and market manipulation, as well as violations of exchange rules and applicable federal securities laws and rules. The hallmarks of a surveillance-sharing agreement are that the agreement provides for the sharing of information about market trading activity, clearing activity, and customer identity; that the parties to the agreement have reasonable ability to obtain access to and produce requested information; and that no existing rules, laws, or practices would impede one party to the agreement from obtaining this information from, or producing it to, the other party.

The Commission has explained that the ability of a national securities exchange to enter into surveillance-sharing agreements “furthers the protection of investors and the public interest because it will enable the exchange to conduct prompt investigations into possible trading violations and other regulatory improprieties.” The Commission has also long taken the position that surveillance-sharing agreements are important in the context of exchange listing of derivative security products, such as equity options, because a surveillance-sharing agreement “permits the sharing of information” that is “necessary to detect” manipulation and “provide[s] an important deterrent to manipulation because [it] facilitate[s] the availability of information needed to fully investigate a potential manipulation if it were to occur.”

With respect to ETPs, when approving the listing and trading of one of the first commodity-linked ETPs—a commodity-linked exchange-traded note—on a national securities exchange, the Commission continued to emphasize the importance of surveillance-sharing agreements, stating that the listing exchange had entered into surveillance-sharing agreements with each of the futures markets on which pricing of the ETP would be based and stating that “[t]hese agreements should help to ensure the availability of information necessary to detect and deter potential manipulations and other trading abuses, thereby making [the commodity-linked notes] less readily susceptible to manipulation.”

Consistent with these statements, for the commodity-trust ETPs approved to date for listing and trading, there has been in every case at least one significant, regulated market for trading futures on the underlying commodity and the ETP listing exchange has entered into surveillance-sharing agreements with, or held Intermarket Surveillance Group (“ISG”) membership in common with, that market. Moreover, the surveillance-sharing agreements have been consistently present whenever the Commission has approved the listing and trading of derivative securities, even where the underlying securities were also listed on national securities exchanges—such as options based on an index of stocks traded on a national securities exchange—and were thus subject to the Commission’s direct regulatory authority.

See USBT Order, 85 FR at 12597; ADR Option Order, 59 FR at 5621. The Commission has also recognized that surveillance-sharing agreements provide a necessary deterrent to fraud and manipulation in the context of index options even when (i) all of the underlying index component stocks were either registered with the Commission or exempt from registration under the Exchange Act; (ii) all of the underlying index component stocks were traded in the markets that trade the ADRs on a national securities exchange; and (iii) effective international ADR arbitrage alleviated concerns over the relatively smaller ADR trading volume, helped to ensure that ADR prices reflected the pricing on the home market, and helped to ensure more reliable price determinations for settlement purposes, due to the unique composition of the index and reliance on ADRs. See Securities Exchange Act Release No. 26653 (Mar. 21, 1989), 54 FR 12705, 12708 (Mar. 28, 1989) (SR–Amex–87–27) (stating that surveillance-sharing agreements between the exchange on which the index option trades and the markets that trade the underlying securities are necessary” and that “[t]he exchange of surveillance data by the exchange listing a stock index option and the markets for the securities comprising the index is important to the detection and deterrence of intermarket manipulation”). And the Commission has explained that surveillance-sharing agreements “ensure the availability of information necessary to detect and deter potential manipulations and other trading abuses” even when approving options based on an index of stocks traded on a national securities exchange. See Securities Exchange Act Release No. 30830 (June 16, 1992), 57 FR 28221, 28224 (June 24, 1992) (SR–Amex–91–22).
market is “uniquely” and “inherently” resistant to fraud and manipulation. In response, the Commission has stated that, if a listing exchange could establish that the underlying market inherently possesses a unique resistance to manipulation beyond the protections that are utilized by traditional commodity or securities markets, the listing market would not necessarily need to enter into a surveillance-sharing agreement with a regulated significant market. Such resistance to fraud and manipulation, however, must be novel and beyond those protections that exist in traditional commodity markets or securities markets for which surveillance-sharing agreements in the context of listing derivative securities products have been consistently present.

Here, NYSE Arca contends that approval of the proposal is consistent with Section 6(b)(5) of the Exchange Act, and, in particular, Section 6(b)(5)’s requirement that the rules of a national securities exchange be designed to prevent fraudulent and manipulative acts and practices and to protect investors and the public interest. As discussed in more detail below, NYSE Arca asserts that the proposal is consistent with Section 6(b)(5) of the Exchange Act because bitcoin offers novel protections beyond those that exist in traditional commodity markets or equity markets and the proposal’s use of the Index (as described below) represents an effective means to prevent fraudulent and manipulative acts and practices. In addition, NYSE Arca asserts that the Chicago Mercantile Exchange (“CME”) bitcoin futures market is a significant, surveilled, and regulated market that is “closely connected” to the spot bitcoin market, and that the Exchange may obtain information from the CME bitcoin futures market and other entities that are members of the ISG to assist in detecting and deterring potential fraud and manipulation with respect to the Trust and the Shares. In addition, NYSE Arca argues that the proposal would protect investors and the public interest because, among other things, the Exchange has in place surveillance procedures relating to trading in the Shares and the proposal would promote competition.

In the analysis that follows, the Commission examines whether the proposed rule change, as modified by Amendment No. 1, is consistent with Section 6(b)(5) of the Exchange Act by addressing: in Section III.B.1 assertions that other means besides surveillance-sharing agreements will be sufficient to prevent fraudulent and manipulative acts and practices; in Section III.B.2 assertions that NYSE Arca has entered into a comprehensive surveillance-sharing agreement with a regulated market of significant size related to spot bitcoin; in Section III.B.3 assertions that the Commission must approve the proposal because the Commission has approved the listing and trading of ETFs and ETNs that hold CME bitcoin futures; in Section III.C assertions that the proposal is consistent with the protection of investors and the public interest; and in Section III.D other arguments raised by commenters.

Based on its analysis, the Commission concludes that NYSE Arca has not established that other means to prevent fraudulent and manipulative acts and practices are sufficient to justify dispensing with the detection and deterrence of fraud and manipulation provided by a comprehensive surveillance-sharing agreement with a regulated market of significant size related to spot bitcoin. The Commission further concludes that NYSE Arca has not established that it has a comprehensive surveillance-sharing agreement with a regulated market of significant size related to spot bitcoin, the underlying bitcoin assets that would be held by the Trust. As a result, the Commission is unable to find that the proposed rule change is consistent with the statutory requirements of Exchange Act Section 6(b)(5).

The Commission emphasizes that its disapproval of this proposed rule change, as modified by Amendment No. 1, does not rest on an evaluation of the relative investment quality of a product holding spot bitcoin versus a product holding CME bitcoin futures, or an assessment of whether bitcoin, or blockchain technology more generally, has utility or value as an innovation or an investment. Rather, the Commission is disapproving this proposed rule change, as modified by Amendment No. 1, because, as discussed below, NYSE Arca has not met its burden to demonstrate that its proposal is consistent with the requirements of Exchange Act Section 6(b)(5).

II. Description of the Proposed Rule Change, as Modified by Amendment No. 1

As described in more detail in Amendment No. 1, the Exchange proposes to list and trade the Shares of the Trust under NYSE Arca Rule 8.201–E, which governs the listing and trading of Commodity-Based Trust Shares on the Exchange.

The investment objective of the Trust is for the value of the Shares (based on bitcoin per Share) to reflect the value of the bitcoins held by the Trust, as determined by reference to the “Index Price,” less the Trust’s expenses and other liabilities. The “Index Price” is the U.S. dollar value of a bitcoin represented by the “Index,” calculated at 4:00 p.m., New York time, on each business day. According to the Exchange, the Index Provider develops, calculates, and publishes the Index on a continuous basis using the price at certain spot bitcoin trading platforms selected by the Index Provider. As of December 31, 2021, the spot bitcoin trading platforms included in the Index were: Coinbase Pro, Bitstamp, Kraken, and LMAX Digital (“Constituent Platforms”). The Index applies an...
algorithm to the price of bitcoin on the Constituent Platforms calculated on a per second basis over a 24-hour period.38

The Trust’s assets will consist solely of bitcoins; Incidental Rights; 39 IR Virtual Currency; 40 proceeds from the sale of bitcoins, Incidental Rights, and IR Virtual Currency pending use of such cash for payment of Additional Trust Expenses 41 or distribution to the shareholders; and any rights of the Trust pursuant to any agreements, other than the Trust Agreement, to which the Trust is a party. Each Share represents a proportional interest, based on the total number of Shares outstanding, in each of the Trust’s assets as determined in the case of bitcoin by reference to the Index Price, less the Trust’s expenses and other liabilities (which include accrued but unpaid fees and expenses).42

On each business day at 4:00 p.m., New York time, or as soon thereafter as practicable, the Sponsor will evaluate the bitcoin held by the Trust and calculate and publish the “Digital Asset Holdings” of the Trust using the Index Price.43 The Trust’s website, as well as one or more major market data vendors, will provide an intra-day indicative value (“IIV”) per Share updated every 15 seconds, as calculated by the Exchange or a third party financial data provider during the Exchange’s Core Trading Session (9:30 a.m. to 4:00 p.m., E.T.). The IIV will be calculated using the same methodology as the Digital Asset Holdings of the Trust, specifically by using the prior day’s closing Digital Asset Holdings per Share as a base and updating that value during the Exchange’s Core Trading Session to reflect changes in the value of the Trust’s Digital Asset Holdings during the trading day.44 In addition, according to the Exchange, “each investor will have access to the current Digital Asset Holdings of the Trust through the Trust’s website, as well as from one or more major market data vendors.”45

The Trust will issue Shares to authorized participants from time to time, but only in one or more Baskets (each “Basket” being a block of 100 Shares). The creation of Baskets will be made only in exchange for the delivery to the Trust of the number of whole and fractional bitcoins represented by each Basket being created.46 The Trust may redeem Shares from time to time, but only in Baskets. The redemption of Baskets requires the distribution by the Trust of the number of bitcoins represented by the Basket being redeemed. The redemption of a Basket will be made only in exchange for the distribution by the Trust of the number of whole and fractional bitcoins represented by each Basket being redeemed.47 Creation and redemption orders may be placed either “in-kind” or “in-cash.”48 Although the Trust will create Baskets only upon the receipt of bitcoins, and will redeem Baskets only by distributing bitcoins, an authorized participant may deposit cash with or receive cash from the Administrator, which will facilitate the purchase or sale of bitcoins through a liquidity provider on behalf of an authorized participant.49

According to the Sponsor, shares of the Trust are currently offered to accredited investors within the meaning of Regulation D under the Securities Act, and, once such investors have held their shares for the requisite holding period pursuant to Rule 144 under the Securities Act, they have the ability to resell them through transactions on the OTCQX Best Market (“OTCQX”), an over-the-counter (“OTC”) marketplace operated by OTC Markets Group that is not registered with the Commission as a national securities exchange.50 The Sponsor states that these shares have been quoted on OTCQX since March 2015 and are available to investors through broker transactions.51 The Sponsor also states that, in the twelve months ended October 31, 2021, trading in these shares accounted for the most transactions by dollar volume of any security traded on OTCQX.52 The Sponsor further states that the Trust is the largest and most liquid bitcoin investment fund in the world and that the Sponsor is the world’s largest digital currency asset manager, with more than $55 billion in assets under management as of October 29, 2021.53

III. Discussion
A. The Applicable Standard for Review

The Commission must consider whether NYSE Arca’s proposal is consistent with the Exchange Act. Section 6(b)(5) of the Exchange Act requires, in relevant part, that the rules of a national securities exchange be designed “to prevent fraudulent and manipulative acts and practices” and “to protect investors and the public interest.”54 Under the Commission’s

40 See id. at 28055–57.
41 See Grayscale Letter I, at 2.
42 See id.
43 See id. at 4.
44 15 U.S.C. 78(b)(5). Pursuant to Section 19(b)(2) of the Exchange Act, 15 U.S.C. 78b(b)(2), the Commission must disapprove a proposed rule change filed by a national securities exchange if it does not find that the proposed rule change is consistent with the applicable requirements of the Exchange Act. Exchange Act Section 6(b)(5) states that an exchange shall not be registered as a national securities exchange unless the Commission determines that “[t]he rules of the exchange are designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, to foster cooperation and coordination with persons engaged in the regulated:
Rules of Practice, the “burden to demonstrate that a proposed rule change is consistent with the Exchange Act and the rules and regulations issued thereunder [‘SRO’] that proposed the rule change.”

The description of a proposed rule change, its purpose and operation, its effect, and a legal analysis of its consistency with applicable requirements must all be sufficiently detailed and specific to support an affirmative Commission finding, and any failure of an SRO to provide this information may result in the Commission not having a sufficient basis to make an affirmative finding that a proposed rule change is consistent with the Exchange Act and the applicable rules and regulations. Moreover, “unquestioning reliance” on an SRO’s representations in a proposed rule change is not sufficient to justify Commission approval of a proposed rule change.

B. Whether NYSE Arca Has Met Its Burden to Demonstrate That the Proposal Is Designed to Prevent Fraudulent and Manipulative Acts and Practices

(1) Assertions That Other Means Besides Surveillance-Sharing Agreements Will Be Sufficient to Prevent Fraudulent and Manipulative Acts and Practices

(i) Assertions Regarding the Bitcoin Market

As stated above, the Commission has recognized that a listing exchange could demonstrate that other means to prevent fraudulent and manipulative acts and practices are sufficient to justify dispensing with the detection and deterrence of fraud and manipulation provided by a comprehensive surveillance-sharing agreement with a regulated market of significant size related to the underlying bitcoin assets, including by demonstrating that the bitcoin market as a whole or the relevant underlying bitcoin market is uniquely and inherently resistant to fraud and manipulation. Such customers, issuers, brokers, or dealers, or to regulate by virtue of any authority conferred by this title matters not related to the purposes of this title or the administration of the exchange. “ 15 U.S.C. 78ff(b)(3).

See id.

See id.

See USBT Order, 85 FR at 12597 n.23. The Commission is not applying a ‘‘cannot be manipulated’’ standard. Instead, the Commission is resistance to fraud and manipulation, however, must be novel and beyond those protections that exist in traditional commodities or securities markets.60

(a) Representations Made and Comments Received

NYSE Arca asserts that “the fundamental features of [b]itcoin’s fungibility, transportability[,] and exchange tradability offer novel protections beyond those that exist in traditional commodity markets or equity markets when combined with other means.”61

In addition, some commenters claim that the spot bitcoin market’s size and depth of liquidity, as well as the diversity of market participants, limits its susceptibility to manipulation.62 An affiliate of the Custodian, for example, states that bitcoin’s average daily trading volume in 2021 was approximately $45 billion, which, according to this commenter, is significantly higher than that of the largest equity stocks.63 This commenter also states that the bitcoin market is comparable in size and transparency as the silver, palladium, and platinum markets, for which the Commission has approved spot ETPs.64 According to this commenter, “[w]hen compared across key market dimensions—trading volume, capitalization, and number of active trading venues—the [b]itcoin spot market is more robust, a sign of lower likelihood of successful market manipulation.”65 Lastly, this commenter states that asset managers, hedge funds, and public companies participate in the bitcoin market and that interest from institutional investors continues to increase.66

Some commenters state that active participation by market makers and arbitrageurs across bitcoin-related markets serves to quickly close arbitrage opportunities, including any that may be due to attempted price manipulation.67 In support of this claim, the affiliate of the Custodian states that it has undertaken empirical research that shows that spot bitcoin prices do not deviate significantly across digital asset platforms.68 According to this commenter, in a comparison of hour-end prices for bitcoin across the Constituent Platforms, the platforms showed less than 20 basis point deviation 97% of the time over a roughly three-year time horizon.69 This commenter states that its observations and interpretations are consistent with those expressed previously by the Commission—that a strong convergence

68 See id. at 3.

86 See id. at 3, 8. See also, e.g., Letter from Douglas Shultz (Feb. 14, 2022) (“Shultz Letter”) (“The cryptocurrency market has passed silver in terms of total market capitalization at various times. If silver can’t be manipulated at these levels, neither can [bitcoin].”).

69 Coinbase Letter II, at 3.

66 See id. at 3.

67 See, e.g., Coinbase Letter II, at 2; Letter from Douglas A. Cifu, Chief Executive Officer, Virtu Financial, Inc., dated Apr. 1, 2022 (“Virtu Letter”), at 3 (“we believe that the active participation by market makers across all of these linked markets—spot, futures, derivatives and ETF—can mitigate the risk of manipulation through competitive liquidity provision, arbitrage and creation/redemption transactions’’); Letter from W. Graham Harper, Head of Public Policy and Market Structure, Cumberland, a subsidiary of DRW Trading Group, dated Apr. 1, 2022 (“Cumberland Letter”), at 2 (“[a]ny narrowly scoped attempt to manipulate the spot [b]itcoin market would be quickly counteracted by the collective activity of arbitrageurs and liquidity providers, ultimately facilitating orderly price discovery potentially causing artificial prices to be perpetuated across all [b]itcoin related products, but in any case, forcing the arbitrage relationships to remain intact’’).

65 See Coinbase Letter II, at 3.

64 See id. at 3. According to this commenter, while there were instances where prices across Constituent Platforms experienced higher deviations than 20 bps, the vast majority (e.g., 90% of deviations greater than 1%) were driven by a single platform’s pricing with less than 5% of the trading volume. In the remaining instances, price differences quickly closed by intermarket trading, typically within one hour, with the exception of two price deviations that lasted three hours during the onset of the Covid-19 pandemic. See id.
of pricing across a broad market is present where spot markets are deep and liquid. This commenter concludes that, given the spot bitcoin market’s significant volume and efficiency of intermarket price correction, manipulating the price of the Shares by manipulating the spot bitcoin market would require a prohibitively large trading volume and coordination across several large trading platforms, and that activity on this scale would be readily detected via surveillance. A number of commenters, however, take the opposite view, arguing, among other things, that the price of bitcoin is subject to manipulation on the unregulated platforms, and approval of the proposal would invite additional manipulation.

(b) Analysis

As with the previous proposals, the Commission here concludes that information in the record regarding the bitcoin market does not support a finding that the Exchange has established other means to prevent fraudulent and manipulative acts and practices sufficient to justify dispensing with the determination and deterrence of fraud and manipulation that is provided by a comprehensive surveillance-sharing agreement with a regulated market of significant size related to spot bitcoin. Likewise, the record does not support a finding that the Exchange has demonstrated that the bitcoin market as a whole or the relevant underlying bitcoin market is uniquely and inherently resistant to fraud and manipulation.

The Commission has identified in previous orders possible sources of fraud and manipulation in the spot bitcoin market, including: (1) “wash” trading; (2) persons with a dominant position in bitcoin manipulating bitcoin pricing; (3) hacking of the bitcoin network and trading platforms; (4) malicious control of the bitcoin network; (5) trading based on material, non-public information (for example, plans of market participants to significantly increase or decrease their holdings in bitcoin, new sources of demand for bitcoin, or the decision of a bitcoin-based investment vehicle on how to respond to a “fork” in the bitcoin blockchain, which would create two different, non-interchangeable types of bitcoin) or based on the dissemination of false and misleading information; (6) manipulative activity involving purported ‘stablecoins,’ including Tether (USDT); and (7) fraud and manipulation at bitcoin trading platforms.

NYSE Arca concedes that neither bitcoin itself nor the global bitcoin markets are inherently resistant to fraud or manipulation. NYSE Arca acknowledges in its proposal that “fraud and manipulation may exist and that [bitcoin] trading on any given exchange may be no more uniquely resistant to fraud and manipulation than other commodity markets.” NYSE Arca also states that “[b]itcoin is not itself inherently resistant to fraud and manipulation” and concedes that “the global exchange market for the trading of [bitcoin]—which NYSE Arca says consists of transactions on the ‘electronic marketplace where exchange participants may trade, buy and sell [bitcoin] on an order book platform’—among other things, failure by Gemini personnel to disclose to the CFTC that Gemini customers could and did engage in collusive or wash trading.”

Moreover, the Trust’s Registration Statement acknowledges that “[d]ue to the unregulated nature and lack of transparency surrounding the operations of [bitcoin trading platforms], this may adversely affect the value of [bitcoin and, consequently, the value of the Shares]; that the bitcoin network is currently vulnerable to a ‘51% attack,’ in which a bad actor or botnet that controls a majority of the processing power dedicated to mining on the bitcoin network may be able to gain full control of the network and the ability to manipulate the bitcoin blockchain; that ‘in 2019 there were reports claiming that 80–95% of [bitcoin trading volume on [bitcoin platforms] was false or non-economic in nature’; and that “[o]ver the past several years, some [bitcoin trading platforms] have been closed due to fraud and manipulative activity, business failure or security breaches.”

NYSE Arca asserts that bitcoin’s fungibility, transportability, and exchange tradability, “when combined with other means,” offer novel protections beyond those that exist in traditional commodity markets or equity markets. The Exchange, however, does not explain how bitcoin is fungible, transportable, or tradable; or how bitcoin’s fungibility, transportability, and tradability offer novel protections or help to detect and deter potential fraud and manipulation. As stated above, “unquestioning reliance” on an SRO’s representations in a proposed rule change is not sufficient to justify the

71 See id. at 4–5.

72 See e.g., Letters from David Rosenthal (Apr. 20, 2022); David Columbia (Apr. 18, 2022); Elliot Kleinfeld (Apr. 19, 2022) (“Kleinfeld Letter”); Scott S. (Feb. 20, 2022); John Carvalho (Feb. 22, 2022); [RE: Innovations (Feb. 14, 2022); Anonymous (Feb. 17, 2022); Adam (Feb. 8, 2022). Some commenters that support approval of the proposal nevertheless state that the spot bitcoin market is subject to manipulation. See, e.g., Letter from Noah Dreyfuss, CIO, Dreyfuss Capital Management, dated Feb. 21, 2022 (“Dreyfuss Letter”), at 1 (“Frankly, one would find great difficulty in claiming that the spot [bitcoin market] is not subject to manipulation.”).

73 See also CFTC v. Gemini Trust Co., LLC, No. 22-cv-4563 (S.D.N.Y. filed June 2, 2022) (alleging, among other things, failure by Gemini personnel to disclose to the CFTC that Gemini customers could and did engage in collusive or wash trading).

75 See Amendment No. 1, 87 FR at 28050–51 (where the CFTC states that “[t]he Commission has expressed legitimate concerns about the underlying [spot bitcoin market] due to the potential for fraud and manipulation” and discusses previous Commission orders finding “evidence of potential and actual fraud and manipulation in the historical trading of [bitcoin] on certain marketplaces such as (1) ‘wash’ trading, (2) trading based on material, non-public information, including the dissemination of false and misleading information, (3) manipulative activity involving Tether, and (4) fraud and manipulation” (where the Exchange asserts that the proposal’s use of the Index mitigates the effects of wash trading and order book spoofing)).

76 See id. at 28054.

77 See id. at 28059 (the “Digital Asset Exchange Market is not inherently resistant to fraud and manipulation”). In its filing, the Exchange uses the term “Digital Asset Exchange Market” as “the global exchange market for the trading of [bitcoin], which consists of transactions on electronic Digital Asset Exchanges.” A “Digital Asset Exchange” is defined by NYSE Arca as “an electronic marketplace where exchange participants may trade, buy and sell [bitcoin] on an order book platform.”

78 See Exhibit 99.1 of the Registration Statement, at 13–14, 17–18. See also 2021 10–K, at 13, 50; Are Blockchains Decentralized? Unintended Centralities in Distributed Ledgers, prepared by Trail of Bits based upon work supported by the Defense Advanced Research Projects Agency, June 2022, available at: https://assets-global.website-files.com/5f1d1235b395d2c1a316d34/620afc641a672b33298a480_Unintended_Centralities_in_Distributed_Ledgers.pdf.

79 See Amendment No. 1, 87 FR at 28051. The Exchange does not explicitly tie the asserted novel aspects of bitcoin to an argument that such market provides sufficient means besides surveillance-sharing agreements to prevent fraud and manipulation.
Commission’s approval of a proposed rule change.83 Further, contrary to the Exchange’s assertion, fungibility, transportability, and tradability are not a novel protection beyond those that exist in traditional commodity or equity markets. Fungible, “transportable,” exchange-traded assets, such as securities and exchange-traded derivatives, trade subject to substantial regulatory oversight and surveillance-sharing agreements that would be unnecessary if fungibility, transportability, and tradability were sufficient protection against fraud and manipulation. Moreover, manipulation of asset prices can occur through trading activity, including activity that creates a false impression of supply and demand.82 Therefore, the Exchange’s assertions about fungibility, transportability, and tradability do not inform the Commission’s view with respect to the necessity that a listing exchange have the abilities to detect and deter fraud and manipulation that are provided by extensive into a comprehensive surveillance-sharing agreement with a regulated market of significant size related to spot bitcoin.83

Likewise, the Commission is not persuaded by commenters’ assertions that the bitcoin market’s size, liquidity, market participation, or arbitrage, either individually or together, sufficiently address concerns regarding fraud and manipulation.84 Although commenters recite various metrics, including market capitalization and average daily trading volume, or make observations concerning the growth of the bitcoin market, including increasing institutional participation, they offer no evidence or analysis of how these metrics or observations serve to detect and deter potential fraud and manipulation. Further, even if the record demonstrates that the bitcoin market’s size, liquidity, market participation, or arbitrage makes manipulation more difficult or costly, as the Commission has stated in prior orders with respect to similar arguments, these attributes speak to providing some resistance to manipulation, rather than establishing a unique resistance to manipulation that would justify dispensing with the detection and deterrence of fraud and manipulation provided by a comprehensive surveillance-sharing agreement with a regulated market of significant size related to spot bitcoin.85 Moreover, commenters do not explain how the bitcoin market’s diversity of market participants, widely held nature, or increase in institutional participation help mitigate concerns about fraud and manipulation such that a surveillance-sharing agreement is unnecessary. In addition, commenters’ assertions about the diverse, broad, and institutional nature of bitcoin’s investor base do not provide any information on the concentration of bitcoin ownership within or among market participants, or take into account that a market participant with a dominant ownership position may not find it prohibitively expensive to overcome the liquidity supplied by arbitrageurs and could use dominant market share to engage in manipulation.86 Indeed, the Sponsor’s own statements cast doubt on assertions that the bitcoin market’s attributes sufficiently address concerns about fraud and manipulation. According to the Sponsor, “[a]s of December 31, 2021, the largest 100 [b]itcoin wallets held approximately 15% of the [b]itcoins in circulation. Moreover, it is possible that other persons or entities control multiple wallets that collectively hold a significant number of [b]itcoins, even if they individually only hold a small amount, and it is possible that some of these wallets are controlled by the same person or entity. As a result of this concentration of ownership, large sales or distributions by such holders could have an adverse effect on the market price of [b]itcoin.”87

The Custodian affiliate’s comparison of the spot bitcoin market to the silver, palladium, and platinum markets also does not support the finding that other means to prevent fraudulent and manipulative acts and practices are sufficient to justify dispensing with the detection and deterrence of fraud and manipulation provided by a comprehensive surveillance-sharing agreement with a regulated market of significant size related to spot bitcoin. As discussed above,88 for the commodity-trust ETPs approved to date for listing and trading, including where the underlying commodity is silver, palladium, or platinum, there has been in every case at least one significant, regulated market for trading futures on the underlying commodity, and the ETP listing exchange has entered into surveillance-sharing agreements with, or held ISG membership in common with, that market.

The Commission is also not persuaded by commenters’ assertion that efficiency of intermarket price correction in the spot bitcoin markets would make manipulating the spot market prohibitively expensive and readily detectable. The affiliate of the Custodian provides various statistics which purport to show that bitcoin prices are closely and increasingly aligned across markets and that any price disparities are quickly arbitraged away. However, such statistics are based on hour-end bitcoin prices and do not capture intra-hour price disparities or provide intra-hour information on how long price disparities persist. Nor do this commenter’s statistics or its assertions provide any insight into what size or duration of price disparities would be needed for a would-be manipulator to have an opportunity to make a profit.89 In any event, as the Commission has explained, efficient price arbitrage is not sufficient to support a finding that a market is uniquely or inherently resistant to manipulation such that the Commission can dispense with surveillance-sharing agreements.90 The Commission has stated, for example, 88 See supra note 23 and accompanying text.
89 See Coinbase Letter II, at 4–5. In addition, the Registration Statement states: “As corresponding increases in throughput lag behind growth in the use of digital asset networks, average fees and settlement times may increase considerably. For example, the Bitcoin Network has been, at times, at capacity, which has led to increased transaction fees. . . . Increased fees and decreased settlement speeds could . . . adversely impact the value of the Shares.” Exhibit 99.1 of the Registration Statement, at 13. See also 2021 10–K, at 46. The affiliate of the Custodian does not provide data or analysis to address, among other things, whether such risks of increased fees and bitcoin transaction settlement times may affect whether arbitrage is as effective as the commenter asserts. And without such data or analysis, the Commission cannot agree with this commenter’s assertions. See Susquehanna, 866 F.3d at 447. See also ARK 21Shares Order, 87 FR at 20019 n.68.
90 See Winklevoss Order, 83 FR at 37586; SolidX Order, 82 FR at 16256–57; USBT Order, 85 FR at 12601; WisdomTree Order, 86 FR at 69325; Valkyrie Order, 86 FR at 71460; Kryptoin Order, 86 FR at 71470; SkyBridge Order, 87 FR at 3738–84; Wise Origin Order, 87 FR at 5531; ARK 21Shares Order, 87 FR at 20019.
that even for equity options based on securities listed on national securities exchanges, the Commission relies on surveillance-sharing agreements to detect and deter fraud and manipulation.91 Equities that underlie such options trade on U.S. equity markets that are deep, liquid, highly interconnected, and almost entirely automated and operate at high speeds measured in microseconds and even nanoseconds.92 Here, the affiliate of the Custodian and other commenters provide insufficient evidence to support their assertion of efficient price arbitrage across bitcoin-related platforms, let alone any evidence that price arbitrage in the bitcoin market is novel and beyond those protections that exist in traditional commodity markets or securities markets so as to warrant the Commission dispensing with the detection and deterrence of fraud and manipulation provided by a comprehensive surveillance-sharing agreement with a regulated market of significant size related to spot bitcoin. Additionally, even assuming that efficiency of intermarket price correction in the spot bitcoin markets results in bitcoin prices increasingly aligned across markets, such alignment is not sufficient to support the finding that a market is uniquely or inherently resistant to manipulation such that the Commission can dispense with surveillance-sharing agreements.93 As stated above, as a general matter, the manipulation of asset prices can occur simply through trading activity that creates a false impression of supply and demand, notwithstanding the presence of linkages among markets, whether these linkages be formal (such as those with consolidated quotations or routing requirements) or informal (such as in the context of the global bitcoin markets).94

(ii) Assertions Regarding the Index
(a) Representations Made and Comments Received

NYSE Arca asserts that the Index used by the Trust to determine the value of its bitcoin assets “represents an effective alternative means to prevent fraud and manipulation[,] and the Trust’s reliance on the Index addresses the Commission’s concerns with respect to potential fraud and manipulation.”95 It states that the Trust “has used the Index to price the Shares for more than six years, and the Index has proven its ability to (i) mitigate the effects of fraud, manipulation and other anomalous trading activity from impacting the [b]itcoin reference rate, (ii) provide a real-time, volume-weighted fair value of bitcoin and (iii) appropriately handle and adjust [ ] for non-market related events, such that efforts to manipulate the price of [b]itcoin would have had a negligible effect on the pricing of the Trust, due to the controls embedded in the structure of the Index.”96

First, NYSE Arca argues that the Index’s use of Constituent Platforms that are compliant with applicable U.S. federal and state licensing requirements and practices regarding anti-money laundering (“AML”) and know-your-customer (“KYC”) regulations reduces the risk of fraud, manipulation, and other anomalous trading activity from impacting the Index. NYSE Arca also states that Constituent Platforms are considered to be Money Services Businesses (“MSBs”) and thus subject to certain requirements such as reporting suspicious activities to the U.S. Department of the Treasury’s FinCEN division, having customer identification through KYC procedures, and establishing a formal AML policy.97 In addition, the Constituent Platforms that are regulated by the New York State Department of Financial Services (“NYSDFS”) under the BitLicense program have regulatory requirements (1) to implement measures designed to effectively detect, prevent, and respond to fraud, attempted fraud, market manipulation, and similar wrongdoing; and (2) to monitor, control, investigate, and report back to the NYSDFS regarding any wrongdoing.98 And according to NYSE Arca, the other non-NYSDFS regulated Constituent Platforms have voluntarily implemented measures to protect against common forms of market manipulation.99 Moreover, according to NYSE Arca, the Commodity Futures Trading Commission (“CFTC”) has the authority to police fraud and manipulation on Constituent Platforms.100 In addition, certain of the Index’s Constituent Platforms “have or have begun to implement market surveillance infrastructure to further detect, prevent, and respond to fraud, attempted fraud, and similar wrongdoing, including market manipulation.”101

93 See, e.g., USBT Order, 85 FR at 12601; WisdomTree Order, 86 FR at 69329; Valkyrie Order, 86 FR at 74160; Kryptoin Order, 86 FR at 74170; Wise Origin Order, 87 FR at 5331; ARK 21Shares Order, 87 FR at 20019.

95 See WisdomTree Order, 86 FR at 69325–26; Kryptoin Order, 86 FR at 74170; SkyBridge Order, 87 FR at 3783–84; Wise Origin Order, 87 FR at 5331; ARK 21Shares Order, 87 FR at 20019.

96 See Winklevoss Order, 83 FR at 37585; ARK 21Shares Order, 87 FR at 20019.
Second, NYSE Arca asserts that other aspects of the methodology employed in constructing the Index mitigate the impact of fraud, manipulation, and other anomalous trading activity.102 The Exchange states that the Index is calculated once every second according to a systematic methodology that relies on observed trading activity on the Constituent Platforms. The key elements of this proprietary methodology are as follows: (i) **volume weighting**—Constituent Platforms with greater liquidity receive a higher weighting in the Index; (ii) **price variance weighting**—the Index reflects data points that are weighted in proportion to their variance from the rest of the Constituent Platforms (i.e., as the price at a particular platform diverges from the prices at the rest of the Constituent Platforms, its weight in the Index Price decreases.); (iii) **inactivity adjustment**—the Index algorithm penalizes stale activity from any given Constituent Platform; and (iv) **manipulation resistance**—the Index only includes executed trades in its calculation in order to mitigate the effects of wash trade and spoofing, and only includes Constituent Platforms that charge trading fees to its users in order to attach a real, quantifiable cost to any manipulation attempts.103 In addition, the Exchange states that, by referencing multiple trading venues and weighting them based on trade activity, the Index mitigates the impact of any potential fraud, manipulation, or anomalous trading activity occurring on any single venue.104 In other words, the effects of fraud, manipulation, or anomalous trading activity occurring on any single venue are de-weighted and consequently diluted by non-anomalous trading activity of other Constituent Platforms.105

Third, NYSE Arca asserts that the Index is constructed and maintained by an expert third-party index provider, which would allow for prudent handling of non-market-related events.106 The Exchange states that in the event that a manual intervention with respect to the Index calculation is necessary in response to “non-market-related events” (e.g., halting of deposits or withdrawals of funds, unannounced closure of platform operations, insolvency, compromise of user funds, etc.), the Index Provider would issue a public announcement.107 NYSE Arca also asserts that the Index Provider reviews and periodical updates which bitcoin platforms are included in the Index by utilizing a methodology that is guided by the IOSCO principles for financial benchmarks.108

(b) Analysis

Based on the assertions made and the information provided with respect to the Index, the record is inadequate to conclude that NYSE Arca has articulated other means to prevent fraud and manipulation that are sufficient to justify dispensing with the detection and deterrence of fraud and manipulation provided by a comprehensive surveillance-sharing agreement with a regulated market of significant size related to spot bitcoin.

First, NYSE Arca argues that the Index’s exclusive use of prices from particular spot bitcoin trading platforms (the Constituent Platforms), which are subject to FinCEN’s AML/KYC regulations, as well as NYSDSF’s BitLicense program for two Constituent Platforms, helps to reduce the impact of fraud and manipulation on the Index Price. The Exchange acknowledges, however, that it “does not believe the inclusion” of these platforms is “in and of itself sufficient to prove that the Index is an alternative means to prevent fraud and manipulation such that surveillance sharing agreements are not required”109 but rather that including only such platforms “in the Index is one significant way in which the Index is protected from the potential impacts of fraud and manipulation.”110

The Commission does not agree that the inclusion of only certain Constituent Platforms as described provides a significant protection against fraud and manipulation. Any oversight afforded by FinCEN and NYSDSF, including AML/KYC or BitLicense regulation, is not a substitute for a surveillance-sharing agreement between the Exchange and a regulated market of significant size related to the underlying bitcoin assets. AML and KYC regulation, for example, do not substitute for the sharing of information about market trading activity or clearing activity that a surveillance-sharing agreement would afford. And although some of the Constituent Platforms may be registered with FinCEN or NYSDSF, these spot bitcoin trading platforms are not comparable to a national securities exchange or futures exchange.110 As the Commission has explained, there are substantial differences between NYSDSF and FinCEN regulation and the Commission’s regulation of national securities exchanges.111 The Commission’s market oversight of national securities exchanges includes substantial requirements, including the requirement to have rules that are “designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, to foster cooperation and coordination with persons engaged in regulating, clearing, settling, processing information with respect to, and facilitating transactions in securities, to remove impediments to and perfect the mechanism of a free and open market and a national market system, and, in general, to protect investors and the public interest.”112 Moreover, national securities exchanges must file proposed

102 See Amendment No. 1, 87 FR at 28052–53.
103 See id. at 6.
104 See id. at 28053. A commenter states that the Trust has “created a robust approach to managing the risk of manipulation by relying on an index of [bitcoin prices from various exchanges]” and that the Index’s “use of a 24-hour VWAP should make any attempt at manipulation prohibitively expensive.” Letter from Peter L. Briger, Jr., Chief Executive Officer, Fortress Investment Group LLC, dated Apr. 25, 2022 (“Fortress Letter”), at 2–3. The Exchange states that the Index no longer utilizes a 24-hour VWAP in its methodology. See supra note 38.
105 See Amendment No. 1, 87 FR at 28052–53.
106 See note 104 above.
107 See USBT Order, 85 FR at 12603–05 and n.101.
108 See id. at 12603 n.101 and accompanying text. See also, e.g., WisdomTree Order, 86 FR at 64545 and n.89; WisdomTree Order, 86 FR at 69328 and n.95; Kryptoin Order, 86 FR at 74173 and n.98; ARK 21Shares Order, 87 FR at 20021–22 and n.107.
109 See USBT Order, 85 FR at 12603 and n.101.
110 See also, e.g., WisdomTree Order, 86 FR at 69328 and n.95; Kryptoin Order, 86 FR at 74173 and n.98; ARK 21Shares Order, 87 FR at 20021–22 and n.107.
111 FinCEN and NYSDSF regulation have been referenced in other bitcoin-based ETP proposals as a purportedly alternative means by which such ETFs would be uniquely resistant to manipulation. See USBT Order, 85 FR at 64545 and n.89; Kryptoin Order, 86 FR at 69328 and n.95; WisdomTree Order, 86 FR at 69328 and n.95; Kryptoin Order, 86 FR at 74173 and n.98; ARK 21Shares Order, 87 FR at 20021–22 and n.107.
rules with the Commission regarding certain material aspects of their operations,113 and the Commission has the authority to disapprove any such rule that is not consistent with the requirements of the Exchange Act.114 Thus, national securities exchanges are subject to Commission oversight of, among other things, their governance, membership qualifications, trading rules, disciplinary procedures, recordkeeping, and fees.115 The Constituent Platforms have none of these requirements—none are registered as a national securities exchange. In addition, NYDFS’s BitLicense program is “guidance” that is “not intended to limit the scope or applicability of any law or regulation,” including the Exchange Act.116

Further, neither the Constituent Platforms’ voluntary adherence to the BitLicense program, nor the Custodian affiliate’s adoption of various surveillance, monitoring, and other measures to address potential manipulative or fraudulent trading activities on its trading platform, is material to the Commission’s analysis. The Exchange provides no supporting evidence to substantiate its claims that the Constituent Platforms have voluntarily implemented measures to protect against common forms of market manipulation and that some of the Constituent Platforms have begun to implement market surveillance infrastructure to further detect, prevent, and respond to fraud, attempted fraud, and similar wrongdoing. Moreover, even taken at face value, these measures, unlike the Exchange Act’s requirements for national securities exchanges,117 are entirely voluntary and therefore have no binding force. The Constituent Platforms, including the platform operated by an affiliate of the Custodian, could change or cease to administer such measures at any time.

NYSE Arca’s assertions regarding the CFTC’s authority with respect to the Constituent Platforms and the underlying bitcoin market also do not establish a level of oversight sufficient to dispense with the detection and deterrence of fraud and manipulation provided by a comprehensive surveillance-sharing agreement with a regulated market of significant size related to spot bitcoin.118 While the Commission recognizes that the CFTC maintains some jurisdiction over the spot bitcoin market, under the Commodity Exchange Act, the CFTC does not have regulatory authority over spot bitcoin trading platforms, including the Constituent Platforms.119 Except in certain limited circumstances, spot bitcoin trading platforms are not required to register with the CFTC,120 and the CFTC does not have standards for, approve the rules of, examine, or otherwise regulate spot bitcoin markets.121 As the CFTC itself stated, while the CFTC “has an important role to play,” U.S. law “does not provide for direct, comprehensive Federal oversight of underlying Bitcoin or virtual currency spot markets.” 122

Second, the record does not demonstrate that the proposed methodology for calculating the Index would make the proposed ETP resistant to fraud or manipulation such that the ability to detect and deter fraud that is provided by a comprehensive surveillance-sharing agreement with a regulated market of significant size related to spot bitcoin is unnecessary. Specifically, NYSE Arca has not assessed the possible influence that spot platforms not included among the Constituent Platforms would have on bitcoin prices used to calculate the Index Price. As discussed above, NYSE Arca does not contest the presence of possible sources of fraud and manipulation in the spot bitcoin market generally.123 Instead, NYSE Arca focuses its analysis on the attributes of the Constituent Platforms, as well as the Index methodology that calibrates the pricing input generated by the Constituent Platforms (such as volume and price-variance weighting and inactivity adjustment). What the Exchange ignores, however, is that to the extent that trading on spot bitcoin platforms not directly used to calculate the Index Price affects prices on the Constituent Platforms, the activities on those other platforms—where various kinds of fraud and manipulation from a variety of sources may be present and persist—may affect whether the Index is resistant to manipulation. Importantly, the record does not demonstrate that these possible sources of fraud and manipulation in the broader spot bitcoin market do not affect the Constituent Platforms that represent a slice of the spot bitcoin market. To the extent that fraudulent and manipulative trading on the broader bitcoin market could influence prices or trading activity on the Constituent Platforms, the Constituent Platforms (and thus the Index) would not be inherently resistant to manipulation.124

---

114 Section 6 of the Exchange Act, 15 U.S.C. 78f, requires national securities exchanges to register with the Commission and requires an exchange’s registration to be approved by the Commission, and Section 19(b) of the Exchange Act, 15 U.S.C. 78s(b), requires national securities exchanges to file proposed rule changes with the Commission and provides the Commission with the authority to disapprove proposed rule changes that are not consistent with the Exchange Act. Designated contract markets (“DCMs”) (commonly called “futures markets”) are subject to regulation by the CFTC, as defined under the Commodity Exchange Act, 7 U.S.C. 2(c)(2)(D), and 2(c)(2)(A)(i), 7 U.S.C. 2(c)(2)(A)(i) (defining CFTC jurisdiction to specifically cover contracts of sale of a commodity (other than foreign currency or a security or a group or index of securities), that is executed or traded on an organized exchange). See also Winklevoss Order, 83 FR at 37599 n.286.
115 See 17 CFR 203.9(a)(1).
118 See Valkyrie Order, 86 FR at 74162.
119 See USBT Order, 85 FR at 12604.
120 See Winklevoss Order, 83 FR at 37599 (“Spot bitcoin markets are not required to register with the CFTC, unless they offer leveraged, margin, or financed trading to retail customers.”). See Commodity Exchange Act Sections 2(c)(2)(D), 7 U.S.C. 2(c)(2)(D), and 2(c)(2)(A)(i), 7 U.S.C. 2(c)(2)(A)(i) (defining CFTC jurisdiction to specifically cover contracts of sale of a commodity for future delivery (or options on such contracts), or an option on an commodity (other than foreign currency or a security or a group or index of securities), that is executed or traded on an organized exchange). See also Winklevoss Order, 83 FR at 37599 n.286.
121 See USBT Order, 85 FR at 12604; SolidX Order, 82 FR at 16256 (concluding that there is nothing in the record to indicate that there is currently a regulatory framework in the United States for detecting and deterring manipulation in the spot bitcoin markets and that “[a]lthough the CFTC can bring enforcement actions against manipulative conduct in spot markets for a commodity, spot markets are not required to register with the CFTC unless they offer leveraged, margin, or financed trading to retail customers. . . . In all other cases, the CFTC does not set standards for, approve the rules of, examine, or otherwise regulate spot bitcoin markets.”).
122 Winklevoss Order, 83 FR at 37599 (quoting CFTC Backgrounder on Oversight of and Approach to Virtual Currency Futures Markets (Jan. 4, 2018), at 1, available at: https://www.cftc.gov/idc/groups/public/@newsroom/file/backgrounder_virtualcurrency01.pdf). See also Testimony of Rostin Behnam, Chair, CFTC, Before the Senate Committee on Agriculture, Nutrition, and Forestry (Feb. 9, 2022), available at: https://www.agriculture.senate.gov/imo/media/doc/Testimony_Behnam_020920225.pdf (“While the crystallization of our enforcement authority through judicial interpretation has proven an effective means of uncovering and addressing some of the regulatory gaps presented by innovation and evolution in the financial markets with respect to digital and related assets, it cannot be viewed as a viable substitute for a functional regulatory oversight regime for the cash digital asset market. . . . In fact, there is no one regulator, either state or federal, with sufficient visibility into digital asset commodity trading activity to fully police conflicts of interest and deceptive trading practices impacting retail customers.”)
123 See supra notes 75–78 and accompanying text.
124 See USBT Order, 85 FR at 12601; WisdomTree Order, 86 FR at 69327; Kryptoin Order, 86 FR at 74172; Valkyrie Order, 86 FR at 74161; Skybridge Order, 87 FR at 3873.
In addition, while NYSE Arca asserts that aspects of the Index methodology mitigate the impact of fraud and manipulation on the Shares, the Commission can find no basis to conclude that the Index methodology constitutes a novel means beyond the protections utilized by traditional commodity or securities markets to prevent fraud and manipulation that is sufficient to justify dispensing with the detection and deterrence of fraud and manipulation provided by a comprehensive surveillance-sharing agreement with a regulated market of significant size related to spot bitcoin. For example, while the Index methodology uses an algorithm to discount prices that deviate from the average (i.e., price variance weighting), this automatic discounting could attenuate, but would not eliminate, the effect of manipulative activity on one of the Constituent Platforms—just as it could attenuate, but would not eliminate, the effect of bona fide liquidity demand on one of those platforms.\(^\text{125}\)

Moreover, NYSE Arca’s assertions that the Trust’s use of the Index helps make the Shares resistant to manipulation conflict with the Registration Statement. Specifically, the Registration Statement represents, among other things, that the market price of bitcoin may be subject to “[m]anipulative trading activity on bitcoin [trading platforms], which are largely unregulated,” and that, “[d]ue to the unregulated nature and lack of transparency surrounding the operations of bitcoin [trading platforms], they may experience fraud, security failures or operational problems, which may adversely affect the value of [bitcoin and, consequently, the value of the Shares].” Constituent Platforms are a subset of the bitcoin trading platforms that the Registration Statement describes.\(^\text{127}\) The Registration Statement also states, specifically with respect to the Index, that “[t]he Index has a limited history and a failure of the [Index Price] could adversely affect the value of the Shares.”\(^\text{128}\) Although the Sponsor raises concerns regarding fraud on and the security of bitcoin platforms, as well as concerns specific to the Index, the Exchange does not explain how or why such concerns are consistent with its assertion that the Index is resistant to fraud and manipulation.

Third, although NYSE Arca asserts that the Index Provider’s oversight of the Index, which includes updating the Constituent Platforms from time to time and handling non-market-related events, mitigates fraud and manipulation in calculation of the Index, the record does not suggest that the purported oversight represents a unique measure to resist or prevent fraud or manipulation beyond protections that exist in traditional securities or commodities markets.\(^\text{129}\) Rather, the oversight performed by the Index Provider appears to be for the purpose of ensuring the accuracy and integrity of the Index. Such Index accuracy and integrity oversight serves a fundamentally different purpose as compared to the regulation of national securities exchanges and the requirements of the Exchange Act. While the Commission recognizes that this may be an important function in ensuring the integrity of the Index, such requirements do not imbue the Index Provider with the authority similar to that which the Exchange Act confers upon SROs such as national securities exchanges.\(^\text{130}\) Furthermore, other commodity-based ETFs approved by the Commission for listing and trading utilize reference rates or indices administered by similar benchmark administrators,\(^\text{131}\) and the Commission has not, in those instances, dispensed with the need for a surveillance-sharing agreement with a significant regulated market.

Finally, NYSE Arca does not explain the significance of the Index’s purported resistance to manipulation to the overall analysis of whether the proposal to list and trade the Shares is designed to prevent fraud and manipulation.\(^\text{132}\) Even assuming that NYSE Arca’s argument is that the price of the Trust’s Shares would be resistant to manipulation if the Index is resistant to manipulation, NYSE Arca has not established in the record a basis for this conclusion because NYSE Arca has not established a link between the price of the Shares and the Index Price, either in the primary or secondary market. While the Index is used by the Trust to value its bitcoin, the Trust will create or redeem Baskets only upon the receipt or distribution of bitcoins from/to authorized participants, and only for the amount of bitcoin represented by the Shares in such Baskets, without reference to the value of such bitcoin as determined by the Index or otherwise. Furthermore, the Shares would trade in the secondary market at market-based prices, not the Index Price. The Exchange provides no information on the relationship between the Index and secondary market prices generally,\(^\text{133}\) or how the use of the Index would mitigate fraud and manipulation of the Shares in the secondary market.\(^\text{134}\)

significant size" includes a market (or group of markets) as to which (i) there is a reasonable likelihood that a person attempting to manipulate the ETP would also have to trade on that market to successfully manipulate the ETP, so that a surveillance-sharing agreement would assist in detecting and deterring misconduct, and (ii) it is unlikely that trading in the ETP would be the predominant influence on prices in that market. As the Commission has explained, it considers two markets that are members of the ISG to have a comprehensive surveillance-sharing agreement with one another, even if they do not have a separate bilateral surveillance-sharing agreement. Accordingly, based on the common membership of NYSE Arca and the CME in the ISG, NYSE Arca has the equivalent of a comprehensive surveillance-sharing agreement with the CME. However, while the Commission recognizes that the CFTC regulates the CME futures market, including the CME bitcoin futures market, and thus such market is "regulated," in the context of the proposed ETP, the record does not, as explained further below, establish that the CME bitcoin futures market is a "market of significant size" related to spot bitcoin, the underlying bitcoin assets that would be held by the Trust. (i) Whether There is a Reasonable Likelihood That a Person Attempting To Manipulate the ETP Would Also Have To Trade on the CME Bitcoin Futures Market to Successfully Manipulate the ETP

The first prong in establishing whether the CME bitcoin futures market constitutes a "market of significant size" related to spot bitcoin is the determination that there is a reasonable likelihood that a person attempting to manipulate the ETP would have to trade on the CME bitcoin futures market to successfully manipulate the ETP. In previous Commission orders, the Commission explained that the lead/lag relationship between the bitcoin futures market and the spot market is "central" to understanding this first prong.139

(a) Assertions Made and Comments Received

The Exchange asserts in its proposal that the CME bitcoin futures market is a "large, surveilled and regulated market that is closely connected with the spot market for [bitcoin] and through which the Exchange could obtain information to assist in detecting and deterring potential fraud or manipulation."140 The Exchange, however, concedes that the Sponsor did not find a significant lead/lag relationship between the spot and the CME bitcoin futures markets. Specifically, according to NYSE Arca, the Sponsor "conducted a lead/lag analysis of per minute data comparing the [bitcoin] futures market, as represented by the CME futures market, to the [bitcoin] spot market, as represented by the Index." However, for the period of 2019, to August 31, 2021, the analysis showed that "there does not appear to be a significant lead/lag relationship between the two instruments."141 The Sponsor’s analysis notwithstanding, NYSE Arca states that "other studies prior to and since such date have found that the CME futures market does lead the [bitcoin] spot market."142

(b) CME bitcoin futures market and the spot market.

To Trade on the CME Bitcoin Futures Market to Successfully Manipulate the ETP

The CFTC regulates the CME, the CFTC is not responsible for direct, comprehensive regulation of the underlying spot bitcoin market. See Winklevoss Order, 83 FR at 37594. See id. at 37580 n.19. See Amendment No. 1, 87 FR at 28054.137 While the Commission recognizes that the CFTC regulates the CME, the CFTC is not responsible for direct, comprehensive regulation of the underlying spot bitcoin market. See Winklevoss Order, 83 FR at 37587, 37599. See also WisdomTree Order, 86 FR at 69330 n.118; Kraken Order, 86 FR at 74174 n.119; SkyBridge Order, 87 FR at 3874 n.80; Wise Origin Order, 87 FR at 5535 n.107; ARK 21Shares Order, 87 FR at 20023 n.121. See, e.g., USBT Order, 65 FR at 12612 ("[E]stablishing a lead-lag relationship between the
reasonable likelihood that a person attempting to manipulate the ETP would also have to trade on that market to successfully manipulate the ETP, since arbitrage between the derivative and spot markets would tend to counter an attempt to manipulate the spot market alone.” 146

Similar to the Sponsor’s analysis, a commenter concludes that the relationship between spot and futures prices is “complex and interrelated with no clear winner.” 147 According to the commenter, the “results of the test of which markets lead during the time period of testing.” 148 Despite the commenter’s lead/lag conclusion, the commenter argues that a would-be manipulator would be unable to manipulate the proposed ETP without also trading in the CME bitcoin futures market, “[g]iven the relative size of trading volumes of bitcoin futures relative to spot, the strong dependence of spot prices on futures prices and vice versa, and the inefficiency of attempting to manipulate the [proposed] ETP through offshore trading.” 149

Regarding the relative size of trading volumes, the commenter states that it examined Bloomberg trading data for the 365 days ended February 4, 2022, across all spot bitcoin trading venues and all CME bitcoin futures contract maturities, and found that the aggregate futures volume ($579 billion) was 31% higher than aggregate spot volume ($442 billion), a result that the commenter found to be statistically significant. 150 Regarding offshore trading, the commenter states that they believe it unlikely “a bad actor would attempt to manipulate the [proposed] ETP through offshore ‘call/put’ currency trading venues” because “offshore trading venues generally do not support fiat trading and instead only support trading between

different cryptocurrencies.” 151 The commenter further states that “offshore trading venues generally offer trading in bitcoin derivatives such as quarterly futures and perpetual futures; however, both would be poor choices for a bad actor seeking to manipulate the [proposed] ETP because both are known to deviate from the bitcoin spot price much more than CME futures,” and thus any actor seeking to manipulate the proposed ETP “would risk expanding or contracting the premium of the derivative being used as a manipulation tool rather than influencing bitcoin spot prices.” 152

(b) Analysis

The record does not demonstrate that there is a reasonable likelihood that a person attempting to manipulate the proposed ETP would have to trade on the CME bitcoin futures market to successfully manipulate the proposed ETP. The Exchange’s and commenters’ assertions about the size of the CME bitcoin futures market in comparison to the Constituent Platforms in particular and/or spot bitcoin markets in general do not establish that the CME bitcoin futures market is of significant size related to spot bitcoin. As the Commission has previously stated, the interpretation of the term “market of significant size” or “significant market” depends on the interrelationship between the market with which the listing exchange has a surveillance-sharing agreement and the proposed ETP. 153 Recitations of data reflecting the size of the CME bitcoin futures market and the size of the spot bitcoin market are not sufficient to establish an interrelationship between the CME bitcoin futures market and the proposed ETP. 154

NYSE Arca asserts that there is a reasonable likelihood that a person would have to trade on the CME bitcoin futures market to successfully manipulate the proposed ETP, because “arbitrage between the derivative and spot markets would tend to counter an attempt to manipulate the spot market alone.” 155 However, the record does not demonstrate the existence of efficient price arbitrage across bitcoin-related platforms, either generally or specifically as it relates to the bitcoin derivative and spot markets. 156 The Exchange also does not provide any additional data or analysis to support its conclusion that the arbitrage that may exist between the bitcoin derivatives markets and spot markets would counter an attempt to manipulate the spot market alone, or to demonstrate that such arbitrage would occur quickly enough to prevent a would-be manipulator of the proposed ETP from profiting off of movements in the spot price. Moreover, even assuming that the Commission concurred with the Exchange’s premise that efficient arbitrage exists between the bitcoin derivatives markets and spot markets, the Exchange does not explain why the presence of efficient arbitrage implies that a would-be manipulator would be reasonably likely to trade specifically on the CME bitcoin futures market rather than on unregulated bitcoin futures markets or other bitcoin derivatives markets. 157

In addition, while a commenter asserts that it is unlikely a would-be manipulator would use offshore bitcoin futures as their manipulation tool, 158 this commenter has not sufficiently explained or supported its assertions. The commenter provides no data or other evidence to support its assertions that, because Tether often trades at a premium or discount to USD, it is not “economically practical”—and therefore “unlikely”—for a bad actor to manipulate the proposed ETP using Tether-denominated bitcoin prices. The commenter also does not provide any data regarding the deviation of offshore futures prices from spot bitcoin prices, or on how much (or how long) attempted manipulation of offshore futures affects this deviation, that would allow for assessment of whether offshore futures would be a “poor choice” for a manipulation tool.

Finally, the econometric evidence in the record for the proposal does not support the conclusion that an interrelationship exists between the CME bitcoin futures market and the spot bitcoin market such that it is reasonably likely that a person attempting to manipulate the proposed ETP would also have to trade on the CME bitcoin futures market. 159 As the Commission

---

146 Amendment No. 1, 87 FR at 28054. A commenter also states its belief that “any attempt to manipulate the price of [the Trust] would likely also require manipulation of the CME futures markets”; that “arbitrage between the spot and derivative markets would quickly counteract the attempted manipulation”; and that “the CME would undoubtedly assist in monitoring and stopping the misconduct.” Fortress Letter, at 3.

147 Letter from Hunting Hill Global Capital, LLC, dated Mar. 3, 2022 (“Hunting Hill Letter”), at 2. The commenter makes this conclusion based on its own lead/lag analysis, “using minute-by-minute last-price data over the [365 days ended February 4, 2022], converted to percentage price changes, based on the first lagged term for both markets.” Id. 148 Id.

149 Id. at 3.

150 See id. at 1–2. Although the observed time periods are different, the Commission observes that the relative trading volume data provided by this commenter is significantly different than the relative trading volume data provided by the Exchange. See supra notes 144–145 and accompanying text.

151 Hunting Hill Letter, at 2–3. To the extent some offshore trading venues allow for bitcoin to be exchanged to Tether, the commenter states that “it would not be economically practical for a bad actor to manipulate the [proposed] ETP using Tether-denominated bitcoin prices” because “manipulation in the bitcoin/USD exchange pair would likely result in a widening of Tether premiums and discounts.” Id. 152 Id. at 3.

153 See USBT Order, 85 FR at 12611.

154 See id. at 12612; Wise Origin Order, 87 FR at 5534–35.

155 Amendment No. 1, 87 FR at 28054.
has stated in previous orders, if the spot market leads the futures market, this would indicate that it would not be necessary to trade on the futures market to manipulate the proposed ETP. But as NYSE Arca concedes, there have been “mixed” findings regarding the lead/lag relationship between the CME futures and spot bitcoin markets. Moreover, based on the Sponsor’s own analysis—the data, methodology, results, and statistical significance of which were not described in the filing—“there does not appear to be a significant lead/lag relationship between the CME bitcoin futures market and the spot bitcoin market. In addition, a commenter’s lead/lag analysis purportedly finds “no clear winner” and a bi-directional relationship between spot bitcoin prices and CME futures prices. And while the Exchange and the Sponsor highlight previous papers and analyses submitted to the Commission in connection with other proposals to list and trade spot bitcoin ETPs to support the premise that the CME bitcoin futures market leads the spot bitcoin market, the Commission disapproved the proposals related to these submissions, and the Commission raised issues and criticisms with respect to these submissions that the Exchange did not address. The Exchange does not provide any additional evidence of an interrelationship between the CME bitcoin futures market, which is the

regulated market, and spot bitcoin platforms, which are the markets on which the assets held by the proposed ETP would trade. As in previous disapprovals, because the lead/lag analysis regarding whether the CME bitcoin futures market leads the spot market remains inconclusive, the Commission determines that the evidence in the record is inadequate to conclude that an interrelationship exists between the CME bitcoin futures market and the spot bitcoin market such that it is reasonably likely that a person attempting to manipulate the proposed ETP would have to trade on the CME bitcoin futures market to successfully manipulate the proposed ETP.

The Commission thus concludes that the information that NYSE Arca provides is not sufficient to support a determination that it is reasonably likely that a would-be manipulator of the proposed ETP would have to trade on the CME bitcoin futures market to successfully manipulate the proposed ETP. Therefore, the information in the record also does not establish that the CME bitcoin futures market is a “market of significant size” related to the assets to be held by the proposed ETP.

(ii) Whether It Is Unlikely That Trading in the Proposed ETP Would Be the Predominant Influence on Prices in the CME Bitcoin Futures Market

The second prong in establishing whether the CME bitcoin futures market constitutes a “market of significant size” related to spot bitcoin is the determination that it is unlikely that trading in the proposed ETP would be the predominant influence on prices in the CME bitcoin futures market.

(a) Assertions Made and Comments Received

NYSE Arca asserts that “it is unlikely that the ETP would become the predominant influence on prices in the market.” In support, NYSE Arca states that the Sponsor examined the change in “market capitalization of bitcoin” with net inflows into the Trust, which currently trades OTC, and found that from November 1, 2019, to August 31, 2021, the market capitalization of bitcoin grew by $721 billion, while the Trust experienced $6.6 billion of inflows over the same period. The Exchange states that the cumulative inflow into the Trust over the stated time period was only 0.9% of the aggregate growth of bitcoin’s market capitalization. The Exchange also states that “the Trust experienced approximately $985.5 billion of trading volume from November 1, 2019, to August 31, 2021, only 23% of the CME futures market and 16% of the Index over the same period.”

(b) Analysis

The record does not demonstrate that it is unlikely that trading in the proposed ETP would be the predominant influence on prices in the CME bitcoin futures market. First, the Sponsor’s comparison of the Trust’s historical inflows to the growth of bitcoin’s market capitalization misapplies the second prong of the Commission’s analysis. As stated above, the second prong in establishing whether the CME bitcoin futures market constitutes a “market of significant size” is the determination that it is unlikely that trading in the proposed ETP would be the predominant influence on prices in the CME bitcoin futures market. The Sponsor’s analysis of the Trust’s historical inflows vis-à-vis the capitalization of the spot bitcoin market considers neither the CME bitcoin futures market nor the CME bitcoin futures market’s prices. Accordingly, such statistics, without more, are not relevant to the Commission’s consideration of whether trading in the ETP would be the predominant influence on prices in the CME bitcoin futures market.

Second, putting aside the question of the spot bitcoin market’s relevance to the second prong of the analysis, neither the Sponsor nor the Exchange has adequately explained why historical inflows into the CME bitcoin futures market are an appropriate proxy for trading in what would be exchange-listed Shares. There is no limit on the amount of mined bitcoins that the Trust may hold. Yet the Sponsor relies on the Trust’s historical inflows and does not provide any information on the expected growth in the size of the Trust if the proposal is approved and the resultant increase in

fourth among global commodity ETPs in assets under management and seventh in notional trading volume for the period from November 1, 2019, to October 31, 2020. See id. at 28054 n.52.
the amount of bitcoin that may be held by the Trust over time, or on the overall expected number, size, and frequency of creations and redemptions—or how any of the foregoing could (if at all) influence prices in the CME bitcoin futures market. Moreover, the Trust’s trading volume cited by the Exchange only relates to the Trust as it trades OTC and does not contemplate what may happen if the Trust converts to an ETP. Commenters state that approval of a spot bitcoin ETP would provide a simpler, safer, and more efficient way to obtain exposure to bitcoin than the products that are currently available to retail investors; and converting the Trust into an ETP would allow for daily creations and redemptions. Further, the Sponsor itself acknowledges that converting the Trust into an ETP would allow the Shares to better track the Trust’s net asset value (“NAV”) and reduce discounts and premiums. Therefore, the Sponsor’s use of historical inflow data is questionable as a way to approximate trading that may ensue in the proposed ETP.

Third, NYSE Arca’s assertions are general and conclusory. While NYSE Arca recites data relating to the market capitalization of bitcoin and inflows to the Trust, and trading volume of the Trust as compared to the CME bitcoin futures market and the Constituent Platforms, NYSE Arca provides no meaningful analysis of such data to support its conclusion. For example, setting aside the issues with the relevance of the data that the Sponsor chose to consider, the analysis performed on such data is merely a comparison of the size of one data point (e.g., change in market capitalization) to the size of another (e.g., net inflows). Such an analysis is, at best, a simple correlation between the two data points; it provides no information relating to the impact of one on the other (e.g., no information on the impact of the Trust’s historical inflows on market capitalization, or of the Trust’s trading volume on the CME bitcoin futures market (let alone, on the CME bitcoin futures market’s prices). In short, the analysis performed provides no information on the influence that is central to the second prong.

Fourth, the data that NYSE Arca provides indicate that the Trust’s trading volume from November 1, 2019, to August 31, 2021, was “only” 23% of that of the CME bitcoin futures market. Even assuming that this historical data is an accurate predictor of the future percentage, neither the Sponsor nor the Exchange directly addresses why a single bitcoin ETP with trading volume close to one-quarter that of the CME bitcoin futures market is not likely to be the predominant influence on prices in that market. Moreover, the Sponsor describes the Trust, as of April 26, 2022, as holding approximately $30 billion in bitcoin, an amount that constitutes 3.4% of all outstanding bitcoin and that far exceeds the value of all open interest in CME bitcoin futures contracts. Yet neither the Sponsor nor the Exchange directly addresses why a spot bitcoin ETP whose assets under management would similarly exceed the value of all open interest in CME bitcoin futures contracts is not likely to be the predominant influence on prices in that market. Thus, the Commission cannot conclude, based on the assertions in the filing and absent sufficient evidence or analysis in support of these assertions, that it is unlikely that trading in the proposed ETP would be the predominant influence on prices in the CME bitcoin futures market.

Therefore, because NYSE Arca has not provided sufficient information to establish both prongs of the “market of significant size” determination, the Commission cannot conclude that the CME bitcoin futures market is “a market of significant size” related to spot bitcoin such that NYSE Arca would be able to rely on a surveillance-sharing agreement with the CME to provide sufficient protection against fraudulent and manipulative acts and practices.

(3) Assertions That the Proposed Spot Bitcoin ETP Is Comparable to Bitcoin Futures-Based ETFs and ETPs

(i) Assertions Made and Comments Received

The Exchange and the Sponsor argue that it would be inconsistent for the Commission to allow the listing and trading of ETPs and ETFs that provide exposure to bitcoin through CME bitcoin futures while disapproving the current proposal.

The Sponsor asserts that CME bitcoin futures ETFs and spot bitcoin ETPs “are the same in all relevant respects.” In support of this assertion, the Sponsor claims that CME bitcoin futures ETFs and ETPs are “priced according to the CME CF Bitcoin Reference Rate” (the “BRR”), which, “in turn, is determined according to pricing data collected from digital asset trading platforms that include all but one of those currently incorporated into [the Index].” NYSE Arca also states that spot bitcoin ETPs, including the Trust, “would be priced by referencing [spot bitcoin platforms] included in the Index, such as through the Index.”

The Sponsor further asserts that, because the BRR is based upon “substantially the same [bitcoin] pricing data” as the Index, both CME bitcoin futures ETFs and ETPs and spot bitcoin ETPs are exposed to the “same risks relating to pricing data quality” (“same data, same risks”). Moreover, because of the “almost complete overlap” in the platforms underlying the BRR and the Index, the Sponsor claims that “the risks of fraud and manipulation in the [bitcoin] market impacting spot [bitcoin] ETPs are indistinguishable from those same risks impacting futures [bitcoin] ETPs.”

The Exchange also asserts...
that, because of this overlap, any potential fraud or manipulation in the underlying spot bitcoin market would impact both CME bitcoin futures ETFs and ETPs and spot bitcoin ETPs. The Sponsor goes further, asserting that "any" fraud or manipulation in the underlying market "will affect both products in the same way." According to the Sponsor, the Commission itself has recognized that "the CME bitcoin futures market is not insulated from potential risks of fraud and manipulation in the underlying [bitcoin market]." The Sponsor even asserts that, "[i]f anything, derivatives markets present additional opportunities for manipulation on top of spot markets—which is why the derivatives markets have an additional layer of federal regulation to begin with." According to the Sponsor, the Commission has never found there to be any meaningful difference in the risk of fraud or manipulation between spot bitcoin and bitcoin futures markets.

The Sponsor further asserts that, "[e]ven with regulation by the CFTC, limiting ETP exposure to [bitcoin] futures does not address the risk of manipulation of underlying [bitcoin] spot market prices—unless the Commission’s view is that CFTC regulation is adequate for all [bitcoin] spot markets, including those in which [the Trust] invests." Given that CME bitcoin futures ETPs currently trade, the Sponsor believes that the Commission’s disapproval of the proposal would violate Section 6(b)(5) of the Exchange Act’s prohibition against unfair discrimination among issuers, and would constitute an arbitrary and capricious administrative action in violation of the Administrative Procedure Act ("APA"). According to the Sponsor, "[t]he Commission has not offered any meaningful explanation for its differential treatment of these competing products." The Sponsor argues that regulation of bitcoin futures ETFs under the 1940 Act offers no protections against fraudulent and manipulative trading in the underlying bitcoin market and provides no basis for treating bitcoin futures ETFs and spot bitcoin ETPs registered under the Securities Act differently.

The Sponsor also argues that the Commission’s standard violates the APA because it is illusory and cannot be satisfied. According to the Sponsor, the framework that the Commission has articulated for assessing whether a proposal to list and trade any bitcoin-based ETP complies with the requirements of Exchange Act Section 6(b)(5) is "so ill-defined and unachievable as to be arbitrary." The Sponsor continues to state that "[t]he Commission has never quantified a 'significant market' or 'market of significant size.'" Moreover, according to the Sponsor, the Commission "has never defined or specified what would actually constitute ‘unique resistance to manipulation’ that is ‘beyond the protections of the traditional commodities and equities markets,’ nor has the Commission explained what it would mean to meet that standard of protection for bitcoin futures ETPs."
means for resistance to be ‘inherent’ or ‘novel’ in this context.” 198

(ii) Analysis

The Commission disagrees with these assertions and conclusions. The proposed rule change does not relate to the same underlying holdings as either ETFs regulated under the 1940 Act that provide exposure to bitcoin through CME bitcoin futures, or CME bitcoin futures-based ETPs registered under the Securities Act but not regulated under the 1940 Act. The Commission considers the proposed rule change on its own merits and under the standards applicable to it. Namely, with respect to this proposed rule change, the Commission must apply the standards as provided by Section 6(b)(5) of the Exchange Act, which it has applied in connection with its orders considering previous proposals to list bitcoin-based commodity trusts and bitcoin-based trust issued receipts. 199

In asserting that for purposes of making a determination to approve or disapprove proposals to list and trade bitcoin futures and spot bitcoin ETPs, the Commission is drawing a distinction about the potential for fraud and manipulation in the CME bitcoin futures market vis-a-vis the spot bitcoin markets, the Exchange, Sponsor, and commenters mischaracterize the framework that the Commission has articulated in the Winklevoss Order. As stated in the Winklevoss Order, the Commission is not applying a “cannot be manipulated” standard—either on the CME bitcoin futures market or the spot bitcoin markets. Rather, as the Commission has repeatedly emphasized, and also summarized above, the Commission is examining whether the proposal meets the requirements of the Exchange Act and, pursuant to its Rules of Practice, is placing the burden on NYSE Arca to demonstrate the validity of its contentions that bitcoin markets “offer novel protections beyond those that exist in traditional commodity markets or equity markets” such that the detection and deterrence of fraud and manipulation provided by a comprehensive surveillance-sharing agreement with a regulated market of significant size related to spot bitcoin is unnecessary. 200 or to establish that it has entered into such a surveillance-sharing agreement. 201

Consistent with this approach, contrary to the Exchange’s, the Sponsor’s, and some commenters’ assertions, the Commission’s consideration (and approval) of proposals to list and trade CME bitcoin futures ETPs, as well as the Commission’s consideration (and thus far, disapproval) of proposals to list and trade spot bitcoin ETPs, does not focus on an assessment of the overall risk of fraud and manipulation in the spot bitcoin or futures markets, or on the extent to which such risks are similar. 202 Rather, the Commission’s focus has been consistently on whether the listing exchange has a comprehensive surveillance-sharing agreement with a regulated market of significant size related to the underlying bitcoin assets of the ETP under consideration, so that it would have the necessary ability to detect and deter manipulative activity. For reasons articulated in the orders approving proposals to list and trade CME bitcoin futures-based ETPs (i.e., the Teucrium Order and the Valkyrie XBTO Order), the Commission found that in each such case the listing exchange has entered into such a surveillance-sharing agreement. 203 Making the same assessment with respect to this proposed spot bitcoin ETP, however, as discussed and explained above, the Commission finds that NYSE Arca has not specifically, for the CME bitcoin futures ETPs under consideration in the Teucrium Order and the Valkyrie XBTO Order, the proposed “significant” regulated market (i.e., the CME) with which the listing exchange has a surveillance-sharing agreement is the same market on which the underlying bitcoin assets (i.e., CME bitcoin futures contracts) trade. As explained in those Orders, the CME’s surveillance can reasonably be relied upon to capture the effects on the CME bitcoin futures market caused by a person attempting to manipulate the CME bitcoin futures ETP by manipulating the price of CME bitcoin futures contracts, whether that attempt is made by directly trading on the CME bitcoin futures market or indirectly by trading outside of the CME bitcoin futures market. 204 Regarding the approved Teucrium Bitcoin Futures Fund in the Teucrium Order (“Fund”), for example, when the CME shares its surveillance information with NYSE Arca (the listing exchange for the Fund), the information would assist in detecting and deterring fraudulent or manipulative misconduct related to the non-cash assets held by the Fund. 205 Accordingly, the Commission explains in the Teucrium Order and the Valkyrie XBTO Order that it is unnecessary for a listing exchange to establish a surveillance-sharing agreement with the detection and deterrence of fraud and manipulation provided by a comprehensive surveillance-sharing agreement with a regulated market of significant size related to the underlying bitcoin assets. But even in this instance, the central issue is about the necessity of such a surveillance-sharing agreement, not the overall risk of fraud and manipulation in the spot bitcoin or futures markets, or the extent to which such risks are similar. 206

199 See supra note 11 and accompanying text. The Sponsor also mischaracterizes the Teucrium Order. For example, the Sponsor states that the Teucrium Order “reflects plainly the Commission’s recognition that the CME bitcoin futures market is not insulated from potential risks of fraud and manipulation in the underlying [bitcoin] market,” and that “the Commission took pains to ‘disagree[ ] with much of [NYSE Arca’s reasoning] about the [bitcoin futures market’s] separation from the underlying [bitcoin] market.'” Grayscale Letter II, at 2. However, in the Teucrium Order, the Commission addresses whether NYSE Arca had supported its claim that it is reasonably likely that a would-be manipulator of the CME bitcoin futures ETP that was the Teucrium Order would have to trade on the CME to manipulate that ETF. See Teucrium Order, 87 FR at 21679. In that context, NYSE Arca had not sufficiently supported its statement that the CME bitcoin futures market “stands alone” or that “[b]itcoin futures prices are not specifically materially influenced by other [bitcoin] markets” for the Commission to be persuaded by such statements. See id. at 21680.

200 See supra note 60 and accompanying text.
201 Although the Sponsor claims that the Commission has never defined or specified what would constitute “unique resistance to manipulation” that is “beyond the protections of the traditional commodities and equities markets,” or explained what it means for resistance to be “inherent” or “novel,” the Sponsor mischaracterizes the premise of its own argument. Listing exchanges, not the Commission, have argued that other means besides surveillance-sharing agreements may be sufficient to prevent fraudulent and manipulative acts and practices, including by asserting that the bitcoin market as a whole or the relevant underlying bitcoin market is “uniquely” and “inherently” resistant to fraud and manipulation. In response, the Commission has agreed with listing exchanges’ posited hypothetical: that, if a listing exchange could establish that the underlying market inherently possesses a unique resistance to manipulation beyond the protections that are utilized by traditional commodity or securities markets—for which surveillance-sharing agreements in the context of listing derivative securities products have been consistently present—the exchange would not necessarily need to enter into a surveillance-sharing agreement with a regulated significant market related to the underlying bitcoin assets. See Winklevoss Order, 83 FR at 37580, 37582–91 (addressing assertions that “bitcoin and bitcoin [spot] markets” generally, as well as one bitcoin exchange platform specifically, have unique resistance to fraud and manipulation). See also USBT Order, 85 FR at 12597. Furthermore, a listing exchange need not substantiate its claim that the underlying bitcoin market is uniquely and inherently resistant to fraud in addition to demonstrating that the listing exchange has a surveillance-sharing agreement with a regulated significant market related to the underlying bitcoin assets.

202 The Commission’s general discussion on the risk of fraud and manipulation in the spot bitcoin or futures markets, whether that risk is inherent to the bitcoin futures market or ’novel,’ the Sponsor’s, and some commenters’ assertions, the Commission’s consideration (and approval) of proposals to list and trade CME bitcoin futures ETPs, as well as the Commission’s consideration (and thus far, disapproval) of proposals to list and trade spot bitcoin ETPs, does not focus on an assessment of the overall risk of fraud and manipulation in the spot bitcoin or futures markets, or on the extent to which such risks are similar. 202 Rather, the Commission’s
reasonable likelihood that a would-be manipulator would have to trade on the CME to itself to manipulate a proposed ETP whose only non-cash holdings would be CME bitcoin futures contracts.206 However, as the Commission also states in those Orders, this reasoning does not extend to spot bitcoin ETPs. Spot bitcoin markets are not currently "regulated."207 If an exchange seeking to list a spot bitcoin ETP relies on the CME as the regulated market with which it has a comprehensive surveillance-sharing agreement, the assets held by the spot bitcoin ETP would not be traded on the CME. Because of this significant difference, with respect to a spot bitcoin ETP, there would be reason to question whether a surveillance-sharing agreement with the CME would, in fact, assist in detecting and deterring fraudulent and manipulative misconduct affecting the price of the spot bitcoin held by that ETP. If, however, an exchange proposing to list and trade a spot bitcoin ETP identifies the CME as the regulated market with which it has a comprehensive surveillance-sharing agreement, the exchange could overcome the Commission’s concern by demonstrating that there is a reasonable likelihood that a person attempting to manipulate the spot bitcoin ETP would have to trade on the CME in order to manipulate the ETP, because such demonstration would help establish that the exchange’s surveillance-sharing agreement with the CME would have the intended effect of aiding in the detection and deterrence of fraudulent and manipulative misconduct related to the spot bitcoin held by the proposed ETP.208 As discussed and explained above,209 the Commission noted that NYSE Arca has not made such demonstration.

To the extent that the Sponsor—by way of claiming that, “[b]ecause both spot and futures-based [b]itcoin products face exposure to the same underlying [b]itcoin market, any fraud or manipulation in the underlying market will affect both products in the same way”210—is arguing that the CME’s surveillance would, in fact, assist in detecting and deterring fraudulent and manipulative misconduct that impacts spot bitcoin ETPs in the same way as it would for misfrastructure that impacts the CME bitcoin futures ETFs/ETPs, the information in the record for this filing does not support such a claim. Specifically, the Sponsor claims that (i) CME bitcoin futures ETFs/ETPs are “priced according to the [BRR];” (ii) the proposed spot bitcoin ETP would be priced based on the Index; and (iii) because of the “almost complete overlap” between the spot platforms whose prices are used to calculate the BRR and the Index, bitcoin futures ETFs/ETPs and the proposed ETP are subject to the “same risks relating to pricing data quality.”211 This logic, however, is flawed for the following reasons.

First, there is no evidence in the record that CME bitcoin futures ETFs/ETPs are “priced according to the [BRR].” The BRR is a once-a-day reference rate of the U.S. dollar price of one bitcoin as of 4 p.m., London time.212 The BRR aggregates the trade flow of its constituent spot bitcoin platforms—Coinbase, Gemini, LMAX Digital, itBit, Kraken, and Bitstamp213—during a specific one-hour calculation window.214 While the BRR is used to value the final cash settlement of CME bitcoin futures contracts, it is not generally used for daily cash settlement of such contracts,215 nor is it claimed to be used for any intra-day trading of such contracts. In addition, CME bitcoin futures ETFs/ETPs do not hold their CME bitcoin futures contracts to final cash settlement; rather, the contracts are rolled prior to their settlement dates. Moreover, the shares of CME bitcoin futures ETFs/ETPs trade in secondary markets, and there is no evidence in the record for this filing that such intra-day, secondary market trading prices are determined by the BRR.

Second, there is no evidence in the record that the Shares’ prices would be determined by the Index. The Index is a U.S. dollar-denominated composite reference rate for the price of bitcoin calculated at 4:00 p.m. New York time.216 As described above, the Index applies an algorithm to the price of bitcoin on the Constituent Platforms—Coinbase Pro, LMAX Digital, Kraken, and Bitstamp—calculated on a per-second basis over a 24-hour period. While the Index is used daily to value the bitcoins held by the Trust,217 as discussed above,218 the Index would not be used for the creation or redemption of Shares, nor is the Index claimed to be used for any intra-day secondary market trading of the Shares, either currently on the OTC market or in the future on the Exchange. Rather, the Share price is discovered through continuous intraday, secondary market interactions of buy and sell interests.219

206 See id.
207 See Teucrium Order, 87 FR at 21679 n.46 (citing USBT Order, 85 FR at 12604; NYDIG Order, 87 FR at 14936 n.65–67). See also Valkyrie XBTO Order, 87 FR at 28851 n.42.
208 See Teucrium Order, 87 FR at 21679 n.46; Valkyrie XBTO Order, 87 FR at 28851 n.42.
209 See Teucrium Order, 87 FR at 21679 n.46; Valkyrie XBTO Order, 87 FR at 28851 n.42. There is reason to question whether the CME’s surveillance would capture manipulation of spot bitcoin that occurs off of the CME, if, for example, off-CME manipulation of spot bitcoin does not also similarly impact CME bitcoin futures contracts. As discussed further below, see infra notes 222–223 and accompanying text, the information in the record for this filing does not sufficiently demonstrate that attempted manipulation of spot bitcoin would also similarly impact CME bitcoin futures contracts.
210 See Teucrium Order, 87 FR at 21679 n.46; Valkyrie XBTO Order, 87 FR at 28851 n.42.
211 See Section III B.2.I, supra.
212 See infra notes 224–225 and accompanying text, the information in the record for this filing does not sufficiently demonstrate that attempted manipulation of spot bitcoin would also similarly impact CME bitcoin futures contracts.
213 See supra notes 132–133 and accompanying text.
216 See https://www.cmegroup.com/education/courses/introduction-to-bitcoin/introduction-to-bitcoin-reference-rate.html. This one-hour window is partitioned into 12, five-minute intervals, where the BRR is calculated as the equally-weighted average of the volume-weighted medians of all 12 partitions. See id.
217 Under normal procedures, daily cash settlements are generally based on the volume-weighted average price of trading activity on CME Globex between 2:59 p.m. and 3:00 p.m., Central Time. See https://www.cmegroup.com/confluence/display/EPICSANDBOX/Bitcoin for a description of CME bitcoin futures daily settlement procedures.
218 See Amendment No. 1, 87 FR at 20847.
219 See id. at 28047, 28049.
220 See supra notes 132–133 and accompanying text.
Third, despite the Sponsor’s claim of “almost complete overlap” between the spot platforms whose prices are used to calculate the BRR and those platforms whose prices are used for the Index, the BRR includes trade flow from Gemini and itBit, neither of which are included as Constituent Platforms of the Index.\(^222\)

In short, and importantly, although the Exchange and the Sponsor focus heavily on the similarities between the BRR and the Index, there is no evidence in the record that the shares of any CME bitcoin futures ETFs/ETPs, or the Shares of the proposed spot bitcoin ETP, would trade in the secondary market at a price related to (or informed by) the BRR or the Index.\(^223\)

Fourth, the Commission’s determination in the Teucrium Order and the Valkyrie XBTO Order to approve the listing and trading of the relevant CME bitcoin futures ETFs was not based on the ETFs’ use—or lack of use—of the BRR (or any other similar pricing mechanism) for the calculation of NAV, or on the fact that the BRR is used for the final cash settlement of CME bitcoin futures contracts. Rather, as discussed above, the Commission approved the listing and trading of such CME bitcoin futures ETFs, not because of the BRR, but because the Commission found that the listing exchanges satisfy the requirement pertaining to a surveillance-sharing agreement with a regulated market of significant size related to the underlying bitcoin assets—which for such ETFs are CME bitcoin futures contracts, not spot bitcoin.

Fifth, even if the Exchange or the Sponsor had demonstrated a link between the BRR and/or the Index and the prices of CME bitcoin futures ETFs/ETPs and the Index, it would not necessarily follow that the CME’s surveillance would, in fact, assist in detecting and deterring fraudulent and manipulative misconduct that impacts spot bitcoin ETFs in the same way as it would for misconduct that impacts the CME bitcoin futures ETFs/ETPs—particularly when such misconduct occurs off of the CME itself.\(^224\) For example, even assuming, for the sake of argument, that the BRR and/or the Index is a potential link between prices on certain spot bitcoin platforms and CME bitcoin futures prices, it does not—absent supporting data—necessarily follow that any manipulation that impacts spot bitcoin also similarly impacts CME bitcoin futures contracts. Neither the Sponsor nor the Exchange has provided any analysis or data that assesses the reaction (if any) of CME bitcoin futures contracts to instances of fraud and manipulation in spot bitcoin markets. Indeed, the only analysis that the Sponsor itself provides is a summary of its lead/lag analysis comparing CME bitcoin futures prices with the Index, from which the Sponsor concludes that “there does not appear to be a significant lead/lag relationship between the two instruments.”\(^225\)

In addition, the disapproval of the proposal would not violate the requirement in Section 6(b)(5) of the Exchange Act\(^226\) that the rules of an exchange not be designed to permit unfair discrimination between issuers, nor would it constitute an arbitrary and capricious administrative action in violation of the APA.\(^227\) Importantly, the issuers are not similarly situated. The issuers of CME bitcoin futures-based ETFs propose to hold only CME bitcoin futures contracts (which are traded on the CME itself) as their only non-cash holdings, and the Trust proposes to hold only spot bitcoin (which is not traded on the CME). As explained in detail above and in the Teucrium Order and the Valkyrie XBTO Order, because of this important difference, for a spot bitcoin ETP, there is reason to question whether a surveillance-sharing agreement with the CME would, in fact, assist in detecting and deterring fraudulent and manipulative misconduct affecting the price of the spot bitcoin held by that ETP.\(^228\) And as discussed above, neither the Exchange, nor the Sponsor, nor any other evidence in the record for this filing, sufficiently demonstrates that the CME’s surveillance is reasonably relied upon to capture the effects of manipulation of the spot bitcoin assets underlying the proposed ETP when such manipulation is not attempted on the CME itself.

Moreover, the analytical framework for assessing compliance with the requirements of Exchange Act Section 6(b)(5) that the Commission applies here (i.e., comprehensive surveillance-sharing agreement with a regulated market of significant size related to the underlying bitcoin assets) is the same one that the Commission has applied in each of its orders considering previous proposals to list bitcoin-based

\(^{222}\) Although the Sponsor states that the BRR is “determined according to pricing data collected from digital asset trading platforms that include all but one of those currently incorporated into [the Index],” \(\text{See Section III.B.1.i. supra.}\) Likewise, the Commission has previously rejected arguments by listing exchanges that the use of a reference rate similar to the BRR to value bitcoin held by proposed spot bitcoin ETPOs provides other means to prevent fraud and manipulation that are sufficiently tied to trading with the detection and deterrence of fraud and manipulation provided by a comprehensive surveillance-sharing agreement with a regulated market of significant size related to spot bitcoin. Wise Origin Order, 87 FR at 5532–33; SkyBridge Order, 87 FR at 3877.

\(^{223}\) Nor does correlation analysis, at daily intervals, help the Sponsor into a single platform Pro, the professional, crypto-made-easy/coinbase-to-shut-down-coinbase-services; https://www.forbesindia.com/article/it-appears-that-coinbase-pro-will-be-discontinued. See also supra notes 2\(^{209}\) and accompanying text.

\(^{224}\) A commenter provides a correlation analysis, using data between November 2021 and February 2022, which purports to show high correlation (99.9\%) between the price of CME bitcoin futures contracts and a Coinbase spot price. \(\text{See Coinbase Letter II, at 7 and Figure 6.}\) The same commenter also provides correlation analysis, using daily price information between December 2021 and February 2022, which purports to show high correlation (99.9\%) between the prices of various non-U.S. spot bitcoin ETPOs and a Coinbase spot price. \(\text{See id. at 8–9 and Figures 11–16.}\) The commenter, however, does not provide evidence with respect to price correlation between shares of CME bitcoin futures ETFs and the BRR or between the prices of various non-U.S. spot bitcoin ETPOs and the Index. Nor does correlation analysis, at daily intervals, provide evidence of the causal economic

\(^{225}\) See Amendment No. 1, 87 FR at 28054.

\(^{226}\) See supra notes 2\(^{208}\)–2\(^{209}\) and accompanying text.

\(^{227}\) The Sponsor argues that disapproval of the proposal would constitute merit regulation, which is not authorized under the Exchange Act. See Grayscale Letter I at 14–15. In addition, the affiliate of the Custodian states that “the Commission’s role is not to evaluate the characteristics and quality of the underlying bitcoin market but instead to evaluate the [proposed] ETP, and the role that [NYSE] Arca would play in monitoring trading in [the Shares].” \(\text{Coinbase Letter I, at 5.}\) \(\text{See also, e.g., Ribbit Capital Letter, at 6; Ribbit Capital Letter, at 7.}\) As previously stated, the Commission is disapproving this proposed rule change because NYSE Arca has not met its burden to demonstrate that its proposal is consistent with the requirements of Exchange Act Section 6(b)(5). The Commission’s disapproval of this proposed rule change does not rest on an evaluation of the relative costs or quality of a product holding spot bitcoin versus a product holding CME bitcoin futures, or an assessment of whether bitcoin, or blockchain technology more generally, has utility or value as an innovation or investment. See, e.g., Winklevoss Order, 83 FR at 37580; USBT Order, 85 FR at 12597; One River Order, 87 FR at 33550.
commodity trusts and trust issued receipts. Although the Commission has applied this framework to each proposal by analyzing the evidence presented by the listing exchange and statements made by commenters. Although the Sponsor states that the Commission’s approach to assessing compliance with Section 6(b)(5) has created a standard that cannot be satisfied and therefore violates the APA, the Commission has in fact recently approved proposals by the Exchange and the Nasdaq Stock Market to list and trade shares of ETPs holding CME bitcoin futures as their only non-cash holdings. And in the orders approving these CME bitcoin futures-based ETPs, the Commission explicitly discussed how an exchange seeking to list and trade a spot bitcoin ETP could overcome the lack of a one-to-one relationship between the regulated market with which it has a surveillance-sharing agreement and the market(s) on which the assets held by a spot bitcoin ETF could be traded: demonstrating that there is a reasonable likelihood that a person attempting to manipulate the spot bitcoin ETP would have to trade on the regulated market (i.e., on the CME) to manipulate the spot bitcoin ETP.

When considering past proposals for spot bitcoin ETPs, the Commission has, in particular, reviewed the econometric and/or statistical evidence in the record to determine whether the listing exchange’s proposal has met the applicable standard. The Commission’s assessment fundamentally presents quantitative, empirical questions, but, as discussed above, the Exchange has not provided evidence sufficient to support its arguments. Instead, the Exchange and the Sponsor make various assertions that are not supported by the limited data in the record regarding, among other things, trading volume and bitcoin market capitalization, or the relationship between spot bitcoin prices and CME bitcoin futures prices (including the lead/lag relationship between the spot market and the CME bitcoin futures market), and the record contains insufficient empirical analysis or quantitative evidence of any such data to support the Exchange’s conclusions.

The requirements of Section 6(b)(5) of the Exchange Act apply to the rules of national securities exchanges. Accordingly, the relevant obligation to have a comprehensive surveillance-sharing agreement with a regulated market of significant size related to spot bitcoin, or other means to prevent fraudulent and manipulative acts and practices that are sufficient to justify dispensing with such a surveillance-sharing agreement, resides with the listing exchange. Because there is insufficient evidence in the record demonstrating that NYSE Arca has satisfied this obligation, the Commission cannot approve the proposed ETP for listing and trading on NYSE Arca.

C. Whether NYSE Arca Has Met Its Burden to Demonstrate That the Proposal Is Designed to Protect Investors and the Public Interest

NYSE Arca contends that, if approved, the proposed ETP would protect investors and the public interest. However, the Commission must consider these potential benefits in the broader context of whether the proposal meets each of the applicable requirements of the Exchange Act. Because NYSE Arca has not demonstrated that its proposed rule change is designed to prevent fraudulent and manipulative acts and practices, the Commission must disapprove the proposal.

(1) Assertions Made and Comments Received

Commenters argue that the Commission should approve the proposal because doing so would satisfy investor demand for a U.S. regulated investment vehicle with direct exposure to bitcoin. Commenters state that approval of a spot bitcoin ETP would provide a simpler, safer, and more efficient way to obtain exposure to bitcoin than the products that are currently available to retail investors, such as holding spot bitcoin, OTC bitcoin funds, bitcoin futures funds, or foreign bitcoin ETPs.

See, e.g., Blockchain Association Letter, at 2 (“while bitcoin futures ETPs have certain useful features, they are inferior investment products for many Americans due to their relatively higher cost and risk profile”); Angel Letter, at 6–7 (stating that “[a] physical-based product in which the fund actually holds the bitcoin would be less vulnerable to manipulation than the futures contracts” and that CME futures contracts experience roll costs, lack liquidity, and have wide bid-ask spreads); Letter from Murray Stahl, Chief Equity Officer, Horizon Kinetics Asset Management LLC, dated Apr. 8, 2022 (“Horizon Kinetics Letter”), at 1–2 (stating that a futures-based bitcoin ETF is not suitable for long-term investors to the extent the performance deviates greatly from the underlying asset and that a spot bitcoin ETF would eliminate such a tracking error); Fortress Letter, at 2–3 (stating that ETFs present investors with a more costly and complex means of gaining exposure to [bit]coin while reflecting only a small portion of the actual market for the digital asset”); Letter from Benjamin
commenters assert that disapproving spot bitcoin ETPs after approving bitcoin futures ETPs and ETPs harms investors. In addition, the Sponsor states that bitcoin futures ETPs present certain structural disadvantages over spot bitcoin ETPs, such as monthly roll-costs and risks due to position limits. Commenters also emphasize that conversion of the existing Trust to an ETP structure would be beneficial to its investors. The Sponsor, for example, states that the Trust has grown to become the largest publicly-traded digital asset fund in the world and that approving the Trust to operate as an ETP trading on a national securities exchange “will provide investors with the additional protections of [the Commission] and [NYSE Arca] while unlocking billions of value for investors.” Moreover, according to the Sponsor, converting the Trust into an ETP would allow the Shares to better track the Trust’s NAV and reduce discounts and premiums, thereby unlocking approximately $8 billion in value for investors. Similarly, commenters state that the proposal would protect investors and help maintain fair and orderly markets by reducing premium and discount volatility with respect to the Shares, thereby allowing investors to gain access to bitcoin through an ETP structure at trading prices that are more closely aligned with spot bitcoin trading prices. Moreover, other commenters state that approving the proposal and allowing the Trust to convert into an ETP would protect investors by, among other things, lowering fees and providing heightened regulation of the Shares.

Several commenters further state that approval of a spot bitcoin ETP would enhance the liquidity, price discovery, and efficiency of the underlying bitcoin markets. The affiliate of the Custodian states that the introduction of a spot bitcoin ETP with a robust create and redeem arbitrage process can improve the price efficiency of an underlying asset and thus further increase the resilience of bitcoin trading in the spot market. This commenter believes the presence of a spot bitcoin ETP “may bolster and stabilize the historically thin dollar/bitcoin market by encouraging a . . . greater volume of activity and easier arbitrage between the two markets.”

Finally, some commenters argue that the proposal should be approved because doing so would enhance investor choice, improve market structure and competition for the benefit of investors, and facilitate capital formation.
(2) Analysis

The Commission disagrees. Here, even if it were true that, compared to trading in unregulated spot bitcoin markets or OTC bitcoin funds, trading a spot bitcoin-based ETF on a national securities exchange could provide some additional protection to investors, or that the Shares would provide more efficient exposure to bitcoin than other products on the market such as bitcoin futures ETNs, or that approval of a spot bitcoin ETF could enhance competition or strengthen the underlying spot bitcoin and derivatives markets, the Commission must consider this potential benefit in the broader context of whether the proposal meets each of the applicable requirements of the Exchange Act.254 Pursuant to Section 19(b)(2) of the Exchange Act, the Commission must approve a proposed rule change filed by a national securities exchange if it finds that the proposed rule change is consistent with the applicable requirements of the Exchange Act—including the requirement under Section 6(b)(5) that the rules of a national securities exchange be designed to prevent fraudulent and manipulative acts and practices—and it must disapprove the filing if it does not make such a finding.255 Thus, even if a proposed rule change purports to protect investors from a particular type of investment risk—such as experiencing a potentially high premium/discount by investing in an OTC bitcoin fund or roll costs by investing in bitcoin futures ETNs—or purports to provide benefits to investors and the public interest—such as enhancing competition and bolstering resiliency in the underlying commodity or futures markets—the proposed rule change may still fail to meet the requirements under the Exchange Act.256

For the reasons discussed above, NYSE Arca has not met its burden of demonstrating an adequate basis in the record for the Commission to find that the proposal is consistent with Exchange Act Section 6(b)(5),257 and, accordingly, the Commission must disapprove the proposal.258

D. Other Comments

Comment letters also address, among other things, the general nature and uses of bitcoin and blockchain technology; 259 the state of development of bitcoin as an investment asset; 260 beneficial tax consequences of approval of a spot bitcoin ETF; 261 the merits of an investment in bitcoin; 262 the nature and state of the bitcoin mining network; 263 the current failure, and potential promotion of, U.S. competitiveness in the global marketplace regarding bitcoin; 264 suggestions for improving regulation of bitcoin and other digital assets markets and related market participants and criticisms of the current regulatory approach; 265 increasing education relating to, and accessibility of, bitcoin; 266 the merits of the Sponsor; 267 and specific concerns relating to the Sponsor and its management of the Trust.268 Ultimately, however, additional discussion of these topics is unnecessary, as they do not bear on the basis for the Commission’s decision to disapprove the proposal.

IV. Conclusion

For the reasons set forth above, the Commission does not find, pursuant to Section 19(b)(2) of the Exchange Act, that the proposed rule change, as modified by Amendment No. 1, is consistent with the requirements of the Exchange Act and the rules and regulations thereunder applicable to a national securities exchange, and in particular, with Section 6(b)(5) of the Exchange Act.

It is therefore ordered, pursuant to Section 19(b)(2) of the Exchange Act, that proposed rule change SR– NYSEArca–2021–90, as modified by Amendment No. 1, be, and hereby is, disapproved.

By the Commission.

Jill M. Peterson,
Assistant Secretary.

[FR Doc. 2022–14310 Filed 7–5–22; 8:45 am]

BILLING CODE 8011–01–P

SECURITIES AND EXCHANGE COMMISSION

Self-Regulatory Organizations; BOX Exchange LLC; Notice of Filing of Proposed Rule Change To Amend Article 4 of the Exchange’s Bylaws To Establish a Staggered Board

June 29, 2022.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (the “Act”),1 and Rule 19b–4 thereunder,2 notice is hereby given that on June 17, 2022, BOX Exchange LLC (the “Exchange”) filed with the Securities and Exchange Commission (the “Commission”) the proposed rule change as described in Items I and II below, which Items have been prepared by the self- regulatory organization. The Commission is publishing this notice to

254 See supra note 235.

256 See SolidX Order, 82 FR at 16259; VanEck Order, 86 FR at 4550–51; WisdomTree Order, 86 FR at 6934; Krypton Order, 86 FR at 74179; Valkyrie Order, 86 FR at 74163; Skybridge Order, 87 FR at 3881; Wise Origin Order, 87 FR at 5538; ARK 21Shares Order, 87 FR at 20026–27.

258 In disapproving the proposed rule change, the Commission has considered its impact on efficiency, competition, and capital formation. See 15 U.S.C. 78s(f). Some commenters state the approval of the proposal would enhance market efficiency and facilitate competition and capital formation. See supra notes 248–253 and accompanying text. For the reasons discussed throughout, however (see supra notes 56–57), the Commission is disapproving the proposed rule change because it does not find that the proposed rule change is consistent with the Exchange Act.
