April 12, 2023

Mark Langer, Clerk of Court
U.S. Court of Appeals for the District of Columbia Circuit
333 Constitution Avenue, N.W.
Washington, D.C. 20001-2866

Re: Grayscale Investments, LLC v. Securities and Exchange Commission, No. 22-1142
Supplemental Authority Under Fed. R. App. P. 28(j)

Dear Mr. Langer:

We write to notify the Court of a recent Order issued by the Commission which further addresses relevant issues. See VanEck Order, 88 Fed. Reg. 16055 (Mar. 15, 2023) (attached). After again reviewing the academic literature regarding price movements in the bitcoin futures and spot markets, the VanEck Order reiterated that such analyses “remain inconclusive.” Id. at 16065 & n.128 (aggregating prior orders’ citations to academic studies); accord SEC Br. 28 & n.26 (same). Compare, e.g., Robertson & Zhang (2022), https://dx.doi.org/10.2139/ssrn.4012165 (unpublished study cited by Grayscale, JA132, concluding that the CME “consistently leads in bitcoin price discovery”), with Alexander & Heck (2020), https://www.sciencedirect.com/science/article/pii/S1572308920300759 (finding that CME bitcoin futures “have a very minor effect on price discovery”). These studies illustrate that ascertaining precisely how information flows between the bitcoin spot and futures markets is a methodologically complex question without an empirical consensus.

These studies also belie Grayscale’s assertion—which it supports with snapshot, once-a-day price correlations—that the “common sense” relationship between spot and futures prices is such that CME bitcoin futures prices “will be affected” by fraud or manipulation of bitcoin spot prices “in like measure” (Grayscale Br. 27). If that were correct, it would suggest, contrary to Grayscale’s own finding, that bitcoin spot prices should reliably lead CME bitcoin futures prices. See SEC Br. 28 (noting Grayscale’s conclusion that “there does not appear to be a significant lead/lag relationship” during one 22-month period). But the academic literature reviewed in the VanEck Order demonstrates that, depending on the time period studied, the methodology used, the data frequency employed (per-minute, per-hour, or per-day), and the particular bitcoin markets included, one can reach different conclusions regarding the nature of the relationship, to the extent one exists.

Because the evidence is mixed, one cannot simply assume that misconduct targeting Grayscale’s proposed spot-based ETP would necessarily have detectable effects on the CME
market for bitcoin futures. Without adequate record evidence on that issue, the CME’s market-surveillance measures cannot support the required statutory finding that the proposed SRO rule change is “designed to prevent fraudulent and manipulative acts and practices.” 15 U.S.C. 78f(b)(5).

Respectfully submitted,

/s/ Daniel T. Young

SECURITIES AND EXCHANGE COMMISSION

Self-Regulatory Organizations; Cboe BZX Exchange, Inc.; Order Disapproving a Proposed Rule Change To List and Trade Shares of the VanEck Bitcoin Trust Under BZX Rule 14.11(e)(4), Commodity-Based Trust Shares

March 10, 2023.

I. Introduction

On June 24, 2022, Cboe BZX Exchange, Inc. ("BZX" or "Exchange") filed with the Securities and Exchange Commission ("Commission"), pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 ("Exchange Act") 1 and Rule 19b–4 thereunder, 2 a proposed rule change to list and trade shares ("Shares") of the VanEck Bitcoin Trust ("Trust") under BZX Rule 14.11(e)(4), Commodity-Based Trust Shares. The proposed rule change was published for comment in the Federal Register on July 13, 2022. 3

On August 24, 2022, pursuant to Section 19(b)(2) of the Exchange Act, 4 the Commission designated a longer period within which to approve the proposed rule change, disapprove the proposed rule change, or institute proceedings to determine whether to disapprove the proposed rule change. 5

On October 4, 2022, the Commission instituted proceedings under Section 19(b)(2)(B) of the Exchange Act 6 to determine whether to approve or disapprove the proposed rule change, and on December 16, 2022, the Commission designated a longer period

March 10, 2023.

I. Introduction

On June 24, 2022, Cboe BZX Exchange, Inc. ("BZX" or "Exchange") filed with the Securities and Exchange Commission ("Commission"), pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 ("Exchange Act") 1 and Rule 19b–4 thereunder, 2 a proposed rule change to list and trade shares ("Shares") of the VanEck Bitcoin Trust ("Trust") under BZX Rule 14.11(e)(4), Commodity-Based Trust Shares. The proposed rule change was published for comment in the Federal Register on July 13, 2022. 3

On August 24, 2022, pursuant to Section 19(b)(2) of the Exchange Act, 4 the Commission designated a longer period within which to approve the proposed rule change, disapprove the proposed rule change, or institute proceedings to determine whether to disapprove the proposed rule change. 5

On October 4, 2022, the Commission instituted proceedings under Section 19(b)(2)(B) of the Exchange Act 6 to determine whether to approve or disapprove the proposed rule change, and on December 16, 2022, the Commission designated a longer period
As the Commission has explained, an exchange that lists bitcoin-based ETPs can meet its obligations under Exchange Act Section 6(b)(5) by demonstrating that the exchange has a comprehensive surveillance-sharing agreement with a regulated market of significant size related to the underlying or reference bitcoin assets. In this context, the terms “significant market” and “market of significant size” include a market (or group of markets) as to which (a) there is a reasonable likelihood that a person attempting to manipulate the ETF would also have to trade on that market to successfully manipulate the ETF, so that a surveillance-sharing agreement would assist in detecting and deterring misconduct, and (b) it is unlikely that trading in the ETF would be the predominant influence on prices in that market. A surveillance-sharing agreement entered into with a “significant market” assists in detecting and deterring manipulation of the ETF, because a person attempting to manipulate the ETF is reasonably likely to engage also in trading activity on that “significant market.”

Although surveillance-sharing agreements are not the exclusive means by which a listing exchange of a commodity-trust ETP can meet its obligations under Exchange Act Section 6(b)(5), such agreements have previously provided the basis for the exchanges that list commodity-trust ETPs to meet those obligations, and the Commission has historically recognized their importance. And where, as here, a listing exchange fails to establish that other means to prevent fraudulent and manipulative acts and practices will be sufficient, the listing exchange must enter into a surveillance-sharing agreement with a regulated market of significant size because such agreements detect and deter fraudulent and manipulative activity.

The Commission has long recognized that surveillance-sharing agreements “provide a necessary deterrent to manipulation because they facilitate the availability of information needed to fully investigate a manipulation if it were to occur and thus enable the Commission to continue to effectively protect investors and promote the public interest.” As the Commission has emphasized, it is essential for an exchange listing a derivative securities product to have the ability that surveillance-sharing agreements provide to obtain information necessary to detect, investigate, and deter fraud and market manipulation, as well as violations of exchange rules and applicable federal securities laws and rules. The hallmarks of a surveillance-sharing agreement are that the agreement provides for the sharing of information about market trading activity, clearing activity, and customer identity; that the parties to the agreement have reasonable ability to obtain access to and produce the requested information; and that no existing rules, laws, or practices would impede one party to the agreement from obtaining this information from, or producing it to, the other party.

15 See Winklevoss Order, 83 FR at 70954–59 (“It is essential that the SRO [self-regulatory organization] have the ability to obtain the information necessary to detect and deter market manipulation and other abuses involving the new derivative securities product. Specifically, there should be a comprehensive ISA [information-sharing agreement] that covers trading in the new derivative securities product and its underlying securities in place between the SRO listing or trading a derivative product and the markets trading the securities underlying the new derivative securities product.”).
16 See NDSP Adopting Release, 63 FR at 70959.
The Commission has explained that the ability of a national securities exchange to enter into surveillance-sharing agreements “further the protection of investors and the public interest because it will enable the exchange to conduct prompt investigations into possible trading violations and other regulatory improprieties.” The Commission has also long taken the position that surveillance-sharing agreements are important in the context of exchange listing of derivative security products, such as equity options, because a surveillance-sharing agreement “permits the sharing of information” that is “necessary to detect” manipulation and “provide[s] an important deterrent to manipulation because [it] facilitate[s] the availability of information needed to fully investigate a potential manipulation if it were to occur.” With respect to ETPs, when approving the listing and trading of one of the first commodity-linked ETPs—a commodity-linked exchange-traded note—on a national securities exchange, the Commission continued to emphasize the importance of surveillance-sharing agreements, stating that the listing exchange had entered into surveillance-sharing agreements with each of the futures markets on which pricing of the ETP would be based and stating that “[t]hese agreements should help to ensure the availability of information necessary to detect and deter potential manipulations and other trading abuses, thereby making [the commodity-linked notes] less readily susceptible to manipulation.”

Listing exchanges have also attempted to demonstrate that other means besides surveillance-sharing agreements will be sufficient to prevent fraudulent and manipulative acts and practices, including that the bitcoin market as a whole or the relevant underlying bitcoin market is “uniquely” and “inherently” resistant to fraud and manipulation. In response, the Commission has stated that, if a listing exchange could establish that the underlying market inherently possesses a unique resistance to manipulation beyond the protections that are utilized by traditional commodity or securities markets, the listing market would not necessarily need to enter into a surveillance-sharing agreement with a regulated significant market. Such resistance to fraud and manipulation, however, must be novel and beyond those protections that exist in traditional commodity markets or securities markets for which surveillance-sharing agreements in the context of listing derivative securities products have been consistently present. BZX contends that approval of the proposal is consistent with Section 6(b)(5) of the Exchange Act, and, in particular, Section 6(b)(5)’s requirement that the rules of a national securities exchange be designed to prevent fraudulent and manipulative acts and practices and to protect investors and the public interest. As discussed in more detail below, BZX asserts that the proposal is consistent with Section 6(b)(5) of the Exchange Act because the Exchange has a comprehensive surveillance-sharing agreement with a
regulated market of significant size,\(^{29}\) and there exist other means to prevent fraudulent and manipulative acts and practices that are sufficient to justify dispensing with the detection and deterrence of fraud and manipulation provided by a comprehensive surveillance-sharing agreement with a regulated market of significant size related to spot bitcoin.\(^{30}\)

In the analysis that follows, the Commission examines whether the proposed rule change is consistent with Section 6(b)(5) of the Exchange Act by addressing: in Section III.B.1 assertions that other means besides surveillance-sharing agreements will be sufficient to prevent fraudulent and manipulative acts and practices; in Section III.B.2 assertions that BZX has entered into a comprehensive surveillance-sharing agreement with a regulated market of significant size related to spot bitcoin; in Section III.B.3 assertions that the Commission must approve the proposal because the Commission has approved the listing and trading of ETPs and ETPs that hold Chicago Mercantile Exchange ("CME") bitcoin futures; and in Section III.C assertions that the proposal is consistent with the protection of investors and the public interest.

Based on its analysis, the Commission concludes that BZX has not established that other means to prevent fraudulent and manipulative acts and practices are sufficient to justify dispensing with the detection and deterrence of fraud and manipulation provided by a comprehensive surveillance-sharing agreement with a regulated market of significant size related to spot bitcoin. The Commission further concludes that BZX has not established that it has a comprehensive surveillance-sharing agreement with a regulated market of significant size related to spot bitcoin, the underlying bitcoin assets that would be held by the Trust. As discussed further below, BZX repeats various assertions made in prior bitcoin-based ETP proposals, including in the Previous VanEck Filing, that the Commission has previously addressed and rejected, including in the Previous VanEck Order—and more importantly, BZX does not respond to many of the Commission’s reasons for rejecting those assertions. As a result, the Commission is unable to find that the proposed rule change is consistent with the statutory requirements of Exchange Act Section 6(b)(5).

The Commission emphasizes that its disapproval of this proposed rule change does not rest on an evaluation of the relative investment quality of a product holding spot bitcoin versus a product holding CME bitcoin futures, or an assessment of whether bitcoin, or blockchain technology more generally, has utility or value as an innovation or an investment. Rather, the Commission is disapproving this proposed rule change because, as discussed below, BZX has not met its burden to demonstrate that its proposal is consistent with the requirements of Exchange Act Section 6(b)(5).

II. Description of the Proposed Rule Change

As described in more detail in the Notice,\(^{31}\) the Exchange proposes to list and trade the Shares of the Trust under BZX Rule 14.11(e)(4), which governs the listing and trading of Commodity-Based Trust Shares on the Exchange.

The investment objective of the Trust would be for the Shares to reflect the performance of the MVIS CryptoCompare Bitcoin Benchmark Rate ("Benchmark"), less the expenses of the Trust’s operations.\(^{32}\) The Benchmark would be used to calculate the Trust’s net asset value ("NAV"). The Benchmark is designed to be a price for bitcoin in USD, and there is no component other than bitcoin in the Benchmark. The current platform composition of the Benchmark is Bitstamp, Coinbase, Gemini, itBit, and Kraken. In calculating the Benchmark, the methodology captures trade prices and sizes from the platforms and examines twenty consecutive three-minute periods leading up to 4:00 p.m. E.T. It then calculates an equal-weighted average of the volume-weighted median price of these twenty three-minute periods, removing the highest and lowest contributed prices.\(^{33}\) Each Share would represent a fractional undivided beneficial interest in the Trust’s net assets. The Trust’s assets would consist of bitcoin held by the Custodian on behalf of the Trust.

\(^{31}\) See supra note 3. According to the Exchange, the Sponsor (as defined herein), on behalf of the Trust, has filed a Form S-1 under the Securities Act dated June 22, 2022 (File No. 333—251808) ("Registration Statement"). See Notice, 87 FR at 41755 n.7.

\(^{32}\) See Notice, 87 FR at 41765. VanEck Digital Assets, LLC ("Sponsor") is the sponsor of the Trust, and Delaware Trust Company is the trustee. The Street Stock Bank and Trust Company will be the administrator ("Administrator") and transfer agent. VanEck Securities Corporation provides assistance in the marketing of the Shares. See id. at 41764. A third-party regulated custodian ("Custodian") will be responsible for custody of the Trust’s bitcoin. See id. at 41755.

\(^{33}\) See id. at 41765.

The Trust generally does not intend to hold cash or cash equivalents. However, there may be situations where the Trust would unexpectedly hold cash on a temporary basis.\(^{34}\)

The Administrator would determine the NAV and NAV per Share of the Trust on each day that the Exchange is open for regular trading, as promptly after 4:00 p.m. E.T. The NAV of the Trust is the aggregate value of the Trust’s assets less its estimated accrued but unpaid liabilities (which include accrued expenses). In determining the Trust’s NAV, the Administrator would value the bitcoin held by the Trust based on the price set by the Benchmark as of 4:00 p.m. E.T.\(^{35}\)

The Trust would provide information regarding the Trust’s bitcoin holdings, as well as an Intraday Indicative Value ("IV") per Share updated every 15 seconds, as calculated by the Exchange or a third-party financial data provider during the Exchange’s Regular Trading Hours (9:30 a.m. to 4:00 p.m. E.T.). The IV would be calculated by using the prior day’s closing NAV per Share as a base and updating that value during Regular Trading Hours to reflect changes in the value of the Trust’s bitcoin holdings during the trading day.\(^{36}\)

When the Trust sells or redeems its Shares, it would do so in “in-kind” transactions in blocks of 50,000 Shares at the Trust’s NAV. Authorized participants would deliver, or facilitate the delivery of, bitcoin to the Trust’s account with the Custodian in exchange for Shares when they purchase Shares, and the Trust, through the Custodian, would deliver bitcoin to such authorized participants when they redeem Shares with the Trust.\(^{37}\)

III. Discussion

A. The Applicable Standard for Review

The Commission must consider whether BZX’s proposal is consistent with the Exchange Act. Section 6(b)(5) of the Exchange Act requires, in relevant part, that the rules of a national securities exchange be designed “to prevent fraudulent and manipulative acts and practices” and “to protect investors and the public interest.”\(^{38}\)

\(^{34}\) See id. at 41764.

\(^{35}\) See id. at 41766.

\(^{36}\) See id. at 41765.

\(^{37}\) See id. at 41764–65.

\(^{38}\) 15 U.S.C. 78f(b)(5). Pursuant to Section 19(b)(2) of the Exchange Act, 15 U.S.C. 78o(b)(2), the Commission must disapprove a proposed rule change filed by a national securities exchange if it does not find that the proposed rule change is consistent with the applicable requirements of the Exchange Act. Exchange Act Section 6(b)(5) states that an exchange shall not be registered as a
Under the Commission’s Rules of Practice, the “burden to demonstrate that a proposed rule change is consistent with the Exchange Act and the rules and regulations issued thereunder . . . is on the self-regulatory organization [‘SRO’] that proposed the rule change.”39 The description of a proposed rule change, its purpose and operation, its effect, and a legal analysis of its consistency with applicable requirements must all be sufficiently detailed and specific to support an affirmative Commission finding,40 and any failure of an SRO to provide this information may result in the Commission not having a sufficient basis to make an affirmative finding that a proposed rule change is consistent with the Exchange Act and the applicable rules and regulations.41

Moreover, “unquestioning reliance” on an SRO’s representations in a proposed rule change is not sufficient to justify Commission approval of a proposed rule change.42

B. Whether BZX Has Met Its Burden To Demonstrate That the Proposal Is Designed To Prevent Fraudulent and Manipulative Acts and Practices

(1) Assertions That Other Means Besides Surveillance-Sharing Agreements Will Be Sufficient To Prevent Fraudulent and Manipulative Acts and Practices

(i) Assertions Regarding the Bitcoin Market

As stated above, the Commission has recognized that a listing exchange could demonstrate that other means to prevent fraudulent and manipulative acts and practices are sufficient to justify dispensing with the detection and deterrence of fraud and manipulation provided by a comprehensive national securities exchange unless the Commission determines that “[t]he rules of the exchange are designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, to foster cooperation and coordination with persons engaged in regulating, clearing, settling, processing information with respect to, and facilitating transactions in securities, to remove impediments to and perfect the mechanism of a free and open market and a national market system, and, in general, to protect investors and the public interest; and are not designed to permit unfair discrimination between customers, issuers, brokers, or dealers, or to regulate by virtue of any authority conferred by this title matters not related to the purposes of this title or the administration of the exchange.” 15 U.S.C. 78f(b)(5).

40 See id.
41 See id.

surveillance-sharing agreement with a regulated market of significant size related to the underlying bitcoin assets, including by demonstrating that the bitcoin market as a whole or the relevant underlying bitcoin market is uniquely and inherently resistant to fraud and manipulation.43 Such resistance to fraud and manipulation, however, must be novel and beyond those protections that exist in traditional commodities or securities markets.44

(a) BZX’s Assertions

BZX asserts that bitcoin is resistant to price manipulation.45 According to BZX, the geographically diverse and continuous nature of bitcoin trading render it difficult and prohibitively costly to manipulate the price of bitcoin.46 BZX asserts that fragmentation across bitcoin platforms, the relatively slow speed of transactions, and the capital necessary to maintain a significant presence on each trading platform make manipulation of bitcoin prices through continuous trading activity challenging.47 In addition, BZX states that, to the extent that there are bitcoin platforms engaged in or allowing wash trading 48 or other activity intended to manipulate the price of bitcoin on other markets, such activity does not normally impact prices on other platforms because participants will generally ignore markets with quotes that they deem non-executable.49 BZX further argues that the linkage between the bitcoin markets and the presence of arbitrageurs in those markets means that the manipulation of the price of bitcoin on any single venue would require manipulation of the global bitcoin price in order to be effective.50 According to BZX, arbitrageurs must have funds distributed across multiple trading platforms in order to take advantage of temporary price dislocations, thereby making it unlikely that there will be strong concentration of funds on any particular bitcoin trading venue.51 As a result, BZX concludes that the potential for manipulation on a bitcoin trading platform would require overcoming the liquidity supply of such arbitrageurs who are effectively eliminating any cross-market pricing differences.52

BZX also states that “the in-kind creation and redemption process and fungibility of bitcoin means that a would be manipulator of a [s]pot [b]itcoin ETP would need to manipulate the price across all bitcoin markets or risk simply providing arbitrage opportunities for authorized participants.”53 BZX asserts that “this arbitrage opportunity also acts to reduce any incentives to manipulate the price of a [s]pot [b]itcoin ETP because the underlying trust will create and redeem shares at set rates of bitcoin per share without regard to the price that the ETP is trading at in the secondary market or the price of the underlying index.”54

(b) Analysis

As with the previous proposals, including the Previous VanEck Filing, the Commission here concludes that the record does not support a finding that the bitcoin market is inherently and uniquely resistant to fraud and manipulation such that the Commission can dispense with the detection and deterrence of fraud and manipulation provided by a comprehensive surveillance-sharing agreement with a regulated market of significant size related to the underlying bitcoin assets. BZX does not sufficiently contest the presence of possible sources of fraud and manipulation in the spot bitcoin market that the Commission has identified in previous orders, including: (1) “wash” trading;55 (2) persons with a dominant position in bitcoin manipulating bitcoin pricing; (3)

50 See id.
51 See id.
52 See id.
53 Id. at 41764.
54 See id.
55 See also CFTC v. Gemini Trust Co., LLC, No. 22-cv–4563 (S.D.N.Y. filed June 2, 2022) (alleging, among other things, failure by Gemini personnel to disclose to the Commodity Futures Trading Commission (‘CFTC’) that Gemini customers could and did engage in collusive or wash trading).
hacking of the bitcoin network and trading platforms; (4) malicious control of the bitcoin network; (5) trading based on material, non-public information (for example, plans of market participants to significantly increase or decrease their holdings in bitcoin, new sources of demand for bitcoin, or the decision of a bitcoin-based investment vehicle on how to respond to a "fork" in the bitcoin blockchain, which would create two different, non-interchangeable types of bitcoin) or based on the dissemination of false and misleading information; (6) manipulative activity involving purported "stablecoins," including Tether (USDT); and (7) fraud and manipulation at bitcoin trading platforms.56

BZX asserts that, because of how bitcoin trades occur, including through continuous means and through fragmented platforms, arbitrage across the bitcoin platforms essentially helps to keep global bitcoin prices aligned with one another, thus hindering manipulation. The Exchange, however, does not provide any data or analysis to support its assertions, either in terms of how closely bitcoin prices are aligned across different bitcoin trading venues or how quickly price disparities may be arbitraged away. Here, the Exchange provides no evidence to support its assertion of efficient price arbitrage across bitcoin platforms, nor any evidence that price arbitrage in the bitcoin market is novel or unique so as to warrant the Commission dispensing with the detection and deterrence of fraud and manipulation provided by a comprehensive surveillance-sharing agreement with a regulated market of significant size related to spot bitcoin. As stated above, "unquestioning reliance" on an SRO’s representations in a proposed rule change is not sufficient to justify Commission approval of a proposed rule change.58

In any event, the Commission has explained that efficient price arbitrage is not sufficient to support the finding that a market is uniquely or inherently resistant to manipulation, or that such the Commission can dispense with surveillance-sharing agreements.59 The Commission has stated, for example, that even for equity options based on securities listed on national securities exchanges, the Commission relies on surveillance-sharing agreements to detect and deter fraud and manipulation.60 Equities that underline such options trade on U.S. equity markets that are deep, liquid, and highly interconnected.61 Moreover, BZX does not take into account that a market participant with a dominant ownership position would not find it prohibitively expensive to overcome the liquidity supplied by arbitrages and could use dominant market share to engage in manipulation.62

In addition, the Exchange makes the unsupported claim that, to the extent that there are bitcoin platforms engaged in or allowing wash trading or other activity intended to manipulate the price of bitcoin on other markets, market participants will generally ignore those platforms. However, the record does not demonstrate that wash trading and other possible sources of fraud and manipulation in the broader bitcoin spot market will be ignored by market participants.63 Without the necessary data or other evidence, the Commission has no basis on which to conclude that bitcoin platforms are insulated from prices of other that

57 For example, the Registration Statement states that "[i]f [increases in throughput on the Bitcoin network] lead to growth in usage of bitcoin, average fees and settlement times may increase considerably" and that such increased fees and decreased settlement speeds "could adversely impact the value of the Shares." See Registration Statement at 20. BZX does not provide data or analysis to address, among other things, whether such risks of increased fees and bitcoin transaction settlement times are sufficient to reduce the arbitrage effectiveness that BZX asserts. See also infra note 72 and accompanying text (referencing statements made in the Registration Statement that contradict assertions made by BZX).

58 See supra note 42 and accompanying text.

68 See supra notes 57–58 and accompanying text. In addition, as discussed above, efficient price arbitrage is not sufficient to support the finding that a market is uniquely or inherently resistant to manipulation such that the Commission can dispense with surveillance-sharing agreements. See supra notes 59–62 and accompanying text.

69 See also infra notes 111–113 and accompanying text setting forth the Commission’s finding that BZX has not demonstrated that in-kind creations and redemptions provide the Shares with a unique resistance to manipulation.
and manipulation.70 For example, the Registration Statement acknowledges that “[b]itcoin [platforms] on which bitcoin trades are relatively new and, in some cases, unregulated, and, therefore, may be more exposed to fraud and security breaches than established, regulated exchanges for other financial assets or instruments”; that “[t]he trading for spot bitcoin occurs on multiple trading venues that have various levels and types of regulation, but are not regulated in the same manner as traditional stock and bond exchanges” and if these spot markets “do not operate smoothly or face technical, security or regulatory issues, that could impact the ability of Authorized Participants to make markets in the Shares” which could lead to “trading in the Shares [to] occur at a material premium or discount against the NAV”; that the bitcoin network “is at risk of vulnerabilities and bugs that can potentially be exploited by malicious actors”; that “[s]ecurity breaches, computer malware, and computer hacking attacks have been a prevalent concern in relation to digital assets”; that the bitcoin blockchain could be vulnerable to a “51% attack,” in which a bad actor that controls a majority of the processing power dedicated to mining on the bitcoin blockchain may be able to alter the bitcoin blockchain on which the bitcoin network and bitcoin transactions rely; that “[t]he nature of the assets held at bitcoin [platforms] makes them appealing targets for hackers and a number of bitcoin [platforms] have been victims of cybercrimes”; and that “over the past several years, a number of bitcoin [platforms] have been closed or faced issues due to fraud, failure, security breaches or governmental regulation.” 71 The Exchange also acknowledges in the proposed rule change that “largely unregulated currency and spot commodity markets do not provide the same protections as the markets that are subject to the Commission’s oversight.” 72

(ii) Assertions Regarding the Benchmark and the Create/Redeem Process

(a) BZX’s Assertions

BZX also argues that the Benchmark, which would be used to value the Trust’s bitcoin, is itself resistant to manipulation based on the Benchmark’s methodology. 73 The Exchange states that the Benchmark is calculated by capturing twenty three-minute periods of trade prices and sizes leading up to 4:00 p.m. E.T. from the constituent platforms. An equal-weighted average of the volume-weighted median price of these twenty three-minute periods is then calculated, removing the highest and lowest contributed prices. 74 According to BZX, “[u]sing twenty consecutive three-minute segments over a sixty-minute period means malicious actors would need to sustain efforts to manipulate the market over an extended period of time, or would need to replicate efforts multiple times across exchanges, potentially triggering review.” 75 Further, according to BZX, the “use of a median price reduces the ability of outlier prices to impact the NAV,” and the “use of a volume-weighted median (as opposed to a traditional median) serves as an additional protection against attempts to manipulate the NAV by executing a large number of low-dollar trades, because any manipulation attempt would have to involve a majority of global spot bitcoin volume in a three-minute window to have any influence on the NAV.” 76 BZX also asserts that “removing the highest and lowest prices further protects against attempts to manipulate the NAV, requiring bad actors to act on multiple [platforms] at once to have any ability to influence the price.” 77

The Exchange also states that the Benchmark’s constituent bitcoin platforms are sourced from the CryptoCompare Exchange Benchmark review report. 78 The Exchange further states that the CryptoCompare Exchange Benchmark methodology “utilizes a combination of qualitative and quantitative metrics to analyze a comprehensive data set across eight categories of evaluation[:] legal/ regulation, KYC/transaction risk, data provision, security, team/exchange, asset quality/diversity, market quality and negative events.” 79 The Exchange states that “the CryptoCompare Exchange Benchmark review report assigns a grade to each [spot bitcoin] platform which helps identify what it believes to be the lowest risk [platforms] in the industry.” 80 According to the Exchange, “[b]ased on the CryptoCompare Exchange Benchmark, MVIS initially selects the top five spot bitcoin platforms by rank for inclusion in the [Benchmark].” 81

Simultaneously with its assertions regarding the Benchmark, BZX also states that, because the Trust will engage in in-kind creations and redemptions only, the “manipulability of the Benchmark is significantly less important.” 82 The Exchange elaborates that, “because the Trust will not accept cash to buy bitcoin in order to create new [S]hares or . . . be forced to sell bitcoin to pay cash for redeemed [S]hares, the price that the Sponsor uses to value the Trust’s bitcoin is not particularly important.” 83 According to BZX, when authorized participants create Shares with the Trust, they would need to deliver a certain number of bitcoin per Share (regardless of the valuation used), and when they redeem with the Trust, they would similarly expect to receive a certain number of bitcoin per Share. 84 As such, BZX argues that, even if the price used to value the Trust’s bitcoin is manipulated, the ratio of bitcoin per Share does not change, and the Trust will either accept (for creations) or distribute (for redemptions) the same number of bitcoin regardless of the value. 85 This, according to BZX, not only mitigates the risk associated with potential manipulation, but also discourages and disincentivizes manipulation of the Benchmark because there is little financial incentive to do so. 86

(b) Analysis

Based on the assertions made and the information provided with respect to the Benchmark and the create/redeem process, the record is inadequate to conclude that BZX has articulated other means to prevent fraud and manipulation that are sufficient to justifiably dispense with the detection and deterrence of fraud and manipulation provided by a comprehensive surveillance-sharing

agreement with a regulated market of significant size related to spot bitcoin.

The record does not demonstrate that the proposed methodology for calculating the Benchmark would make the proposed ETP resistant to fraud or manipulation sufficient to dispense with the ability to detect and deter fraud and manipulation that is provided by a comprehensive surveillance-sharing agreement with a regulated market of significant size related to spot bitcoin. Specifically, BZX has not assessed the possible influence that spot platforms not included among the Benchmark’s constituent platforms would have on bitcoin prices used to calculate the Benchmark.87 As discussed above, BZX does not sufficiently contest the presence of possible sources of fraud and manipulation in the spot bitcoin market generally.88 Instead, BZX focuses its analysis on the Benchmark’s calculation methodology, as well as on the eligibility and attributes of the Benchmark’s constituent bitcoin platforms. What the Exchange does not address, however, is that, to the extent that trading on spot bitcoin platforms not directly used to calculate the Benchmark affects prices on the Benchmark’s constituent platforms, the activities on those other platforms where various kinds of fraud and manipulation from a variety of sources may be present and persist may affect whether the Benchmark is resistant to manipulation. Importantly, the record does not demonstrate that these possible sources of fraud and manipulation in the broader spot bitcoin market do not affect the Benchmark’s constituent bitcoin platforms that represent a portion of the spot bitcoin market. To the extent that fraudulent and manipulative trading on the broader bitcoin market could influence prices or trading activity on the Benchmark’s constituent platforms, such platforms (and thus the Benchmark) would not be inherently resistant to manipulation.89

In addition, while BZX asserts that aspects of the Benchmark methodology mitigate the impact of fraud and manipulation on the Shares, the Commission can find no basis to conclude that the Benchmark methodology constitutes a novel means beyond the protections utilized by traditional commodity or securities markets to prevent fraud and manipulation that is sufficient to justify dispensing with the detection and deterrence of fraud and manipulation provided by a comprehensive surveillance-sharing agreement with a regulated market of significant size related to spot bitcoin. BZX has not shown that its proposed use of twenty consecutive three-minute periods over a sixty-minute period leading up to 4:00 p.m. E.T. of trade prices from the constituent platforms to calculate the Benchmark would effectively be able to mitigate fraudulent or manipulative activity that is not transient. As the Commission has previously stated, fraud and manipulation in the spot bitcoin market could persist for a “significant duration.”90 The Exchange does not explain how the use of such partitions would protect against the effects of the wash and fictitious trading that may persist in the spot bitcoin market for a significant duration.91 While the Benchmark methodology calculates an equal-weighted average of the volume-weighted median price of these twenty three-minute periods and removes the highest and lowest contributed prices, this methodology could at most attenuate, but not eliminate, the effect of manipulative activity on the Benchmark’s constituent bitcoin platforms—just as it could at most attenuate, but would not eliminate, the effect of bona fide liquidity demand on those platforms.92

Moreover, the Exchange’s assertions that the Benchmark’s methodology helps make the Benchmark resistant to manipulation conflict with the Registration Statement. Specifically, the Registration Statement represents, among other things, that “[b]itcoin [platforms] on which bitcoin trades are relatively new and, in some cases, unregulated, and, therefore, may be more exposed to fraud and security breaches than established, regulated exchanges for other financial assets or instruments, which could have a negative impact on the Trust.”93 The Benchmark’s constituent bitcoin platforms are a subset of the bitcoin trading venues currently in existence. The Registration Statement also states, specifically with respect to the Benchmark, that the Benchmark is “based on various inputs which may include price data from various third-party exchanges and markets” and that these inputs “may be subject to technological error, manipulative activity, or fraudulent reporting from their initial source.”94 Although the Sponsor raises concerns regarding fraud and security of bitcoin platforms in the Registration Statement, as well as concerns specific to the Benchmark, the Exchange does not explain how or why such concerns are consistent with its assertion that the Benchmark is resistant to fraud and manipulation.

In addition, BZX represents that the Benchmark includes only the top five spot bitcoin platforms, as ranked by the CryptoCompare Exchange Benchmark review report based on the following categories: legal/regulation, KYC/transaction risk, data provision, security, team/exchange, asset quality/diversity, market quality and negative events. However, the existing level of oversight of the Benchmark’s underlying bitcoin platforms, whose trade flows might contribute to the Benchmark, is not equivalent to the obligations, authority, and oversight of national securities exchanges or futures exchanges and therefore is not an appropriate substitute.95 For example, the Commission’s market oversight of national securities exchanges includes substantial requirements, including the requirement to have rules that are “designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, to foster cooperation and coordination with persons engaged in regulating, clearing, settling, processing information with respect to, and facilitating transactions in securities, to remove impediments to and perfect the mechanism of a free and open market and a national market system, and, in general, to protect investors and the public interest.”96 Moreover, national securities exchanges must file proposed rules with the Commission regarding certain material aspects of their operations,97 and the Commission has the authority to disapprove any such rule that is not consistent with the requirements of the Exchange Act.98

87 As discussed above, while the Exchange asserts that bitcoin prices on platforms with wash trades or other activity intended to manipulate the price of bitcoin would generally be ignored, the Commission has no basis on which to conclude that bitcoin platforms are insulated from prices of others that engage in or permit fraud or manipulation. See supra notes 63–64 and accompanying text.

88 See supra notes 55–56 and accompanying text.

91 See WisdomTree Order, 86 FR at 69327.

92 See SolidX Order, 82 FR at 16257.

93 See Registration Statement at 7, 19. See also supra note 71 and accompanying text.

94 See Registration Statement at 23.

95 See also USBT Order, 85 FR at 12603–05; Previous VanEck Order, 86 FR at 64545; WisdomTree Order, 86 FR at 69328; Kryptoin Order, 86 FR at 74173.

98 Section 6 of the Exchange Act, 15 U.S.C. 78f, requires national securities exchanges to register with the Commission and requires an exchange’s registration to be approved by the Commission, and
Thus, national securities exchanges are subject to Commission oversight, among other things, their governance, membership qualifications, trading rules, disciplinary procedures, recordkeeping, and fees. The Benchmark's underlying spot bitcoin platforms have none of these requirements—none are registered as a national securities exchange and none are comparable to a national securities exchange or futures exchange.

The Commission thus concludes that the Exchange has not demonstrated that its Benchmark methodology makes the proposed ETP resistant to manipulation. While the proposed procedures for calculating the Benchmark using only prices from the Benchmark's constituent spot bitcoin platforms are intended to provide some degree of protection against attempts to manipulate the Benchmark, these procedures are not sufficient for the Commission to dispense with the detection and deterrence of fraud and manipulation provided by a comprehensive surveillance-sharing agreement with a regulated market of significant size related to spot bitcoin.

Further, BZX does not explain the significance of the Benchmark's purported resistance to manipulation for the overall analysis of whether the proposal to list and trade the Shares is designed to prevent fraud and manipulation. To the extent that BZX's argument is that the price of the Trust's Shares would be resistant to manipulation if the Benchmark is resistant to manipulation, BZX has not established in the record a basis for this conclusion because BZX has not established a link between the price of the Shares and the Benchmark, either in the primary or secondary market. The Trust uses the Benchmark to calculate the value of the bitcoin it holds according to the methodology discussed above. However, the Trust will create or redeem baskets in the primary market only upon the receipt or distribution of bitcoins from/to authorized participants, and only for the amount of bitcoin represented by the Shares in such baskets, without reference to the value of such bitcoin as determined by the Benchmark or otherwise. In the

Section 19(b) of the Exchange Act, 15 U.S.C. 78s(b), requires national securities exchanges to file proposed rule changes with the Commission and provides the Commission with the authority to disapprove proposed rule changes that are not consistent with the Exchange Act. Designated contract markets ("DCMs") that are not registered with the CFTC must comply with, among other things, a similarly comprehensive range of regulatory principles and rules changes with the CFTC. See, e.g., Designated Contract Markets (DCMs), CFTC, available at https://www.cftc.gov/IndustryOversight/TradingOrganizations/DCMs/index.htm.

The Commission notes that the New York State Department of Financial Services ("NYSDFS") has issued guidelines for supervised virtual currency business entities, stating that these entities must "implement measures designed to effectively detect, prevent, and respond to fraud, attempted fraud, and similar wrongdoing." See Maria T. Vullo, Superintendent of Financial Services, NYSDFS, Guidance on Prevention of Market Manipulation and Other Wrongful Activity (Feb. 7, 2018), available at https://www.dfs.ny.gov/docs/legal/industry/l180207.pdf. The NYSDFS recognizes that its "guidance is not intended to limit the scope or applicability of any law or regulation" (id.), which would include the Exchange Act. Nothing in the record evidences whether the Benchmark's constituent bitcoin platforms have complied with this NYSDFS guidance. Further, as stated previously, there are substantial differences in the benchmark methodologies and procedures, for example, have been referenced in other bitcoin-based ETP proposals as a purportedly alternative means by which such ETPs would be uniquely resistant to manipulation.

The Commission has previously concluded that such AML and KYC policies and procedures do not serve as a substitute for, and are not otherwise dispositive of AML and KYC policies and procedures do not substitute for the sharing of information about market trading activity or clearing activity that a surveillance sharing agreement would afford and do not substitute for regulation as a national securities exchange. See USBT Order, 86 FR at 46553 & n.89; WisdomTree Order, 86 FR at 69328 n.95; Kryptoin Order, 86 FR at 74173 n.98.

The Commission has previously considered and rejected similar arguments about the valuation of bitcoin accordingly. See, e.g., SolidX Order, 82 FR at 16258; Winklevoss Order, 83 FR at 37597–98; USBT Order, 85 FR at 12599–601; WisdomTree Order, 86 FR at 69327–28; Valkyrie Order, 86 FR at 74162; ARK 21Shares Order, 87 FR at 20022; Grayscale Order, 87 FR at 40310.

The Commission has previously concluded that such AML and KYC policies and procedures do not serve as a substitute for, and are not otherwise dispositive in the analysis regarding the importance of, having a surveillance sharing agreement with a regulated market of significant size relating to the underlying bitcoin assets. For example, AML and KYC policies and procedures do not substitute for the sharing of information about market trading activity or clearing activity that a surveillance sharing agreement would afford and do not substitute for regulation as a national securities exchange.

Thus, national securities exchanges are subject to Commission oversight, among other things, their governance, membership qualifications, trading rules, disciplinary procedures, recordkeeping, and fees. The Benchmark's underlying spot bitcoin platforms have none of these requirements—none are registered as a national securities exchange and none are comparable to a national securities exchange or futures exchange.

The Commission thus concludes that the Exchange has not demonstrated that its Benchmark methodology makes the proposed ETP resistant to manipulation. While the proposed procedures for calculating the Benchmark using only prices from the Benchmark's constituent spot bitcoin platforms are intended to provide some degree of protection against attempts to manipulate the Benchmark, these procedures are not sufficient for the Commission to dispense with the detection and deterrence of fraud and manipulation provided by a comprehensive surveillance-sharing agreement with a regulated market of significant size related to spot bitcoin. Further, BZX does not explain the significance of the Benchmark's purported resistance to manipulation for the overall analysis of whether the proposal to list and trade the Shares is designed to prevent fraud and manipulation. To the extent that BZX's argument is that the price of the Trust's Shares would be resistant to manipulation if the Benchmark is resistant to manipulation, BZX has not established in the record a basis for this conclusion because BZX has not established a link between the price of the Shares and the Benchmark, either in the primary or secondary market. The Trust uses the Benchmark to calculate the value of the bitcoin it holds according to the methodology discussed above. However, the Trust will create or redeem baskets in the primary market only upon the receipt or distribution of bitcoins from/to authorized participants, and only for the amount of bitcoin represented by the Shares in such baskets, without reference to the value of such bitcoin as determined by the Benchmark or otherwise. In the

The Exchange points out that the Trust will create and redeem Shares in-kind, not in cash, which renders the NAV calculation, and thereby the ability to manipulate NAV, "significantly less important." In BZX's own words, the Trust will not accept cash to buy bitcoin in order to create Shares or sell bitcoin to pay cash for redeemed Shares, so the price that the Sponsor uses to value the Trust's bitcoin "is not particularly important." It follows that the Benchmark's resistance to manipulation is not material to the Shares' susceptibility to fraud and manipulation. As the Exchange does not address or provide any analysis with respect to these issues, the Commission cannot conclude bitcoin ETP would be able to source bitcoin from an exchange and create or redeem Shares in an applicable trust regardless of the price of the underlying bitcoin. See id. at 41764.

The Exchange points out that the Trust will create and redeem Shares in-kind, not in cash, which renders the NAV calculation, and thereby the ability to manipulate NAV, "significantly less important." In BZX's own words, the Trust will not accept cash to buy bitcoin in order to create Shares or sell bitcoin to pay cash for redeemed Shares, so the price that the Sponsor uses to value the Trust's bitcoin "is not particularly important." It follows that the Benchmark's resistance to manipulation is not material to the Shares' susceptibility to fraud and manipulation. As the Exchange does not address or provide any analysis with respect to these issues, the Commission cannot conclude bitcoin ETP would be able to source bitcoin from an exchange and create or redeem Shares in an applicable trust regardless of the price of the underlying bitcoin. See id. at 41764.

The Exchange points out that the Trust will create and redeem Shares in-kind, not in cash, which renders the NAV calculation, and thereby the ability to manipulate NAV, "significantly less important." In BZX's own words, the Trust will not accept cash to buy bitcoin in order to create Shares or sell bitcoin to pay cash for redeemed Shares, so the price that the Sponsor uses to value the Trust's bitcoin "is not particularly important." It follows that the Benchmark's resistance to manipulation is not material to the Shares' susceptibility to fraud and manipulation. As the Exchange does not address or provide any analysis with respect to these issues, the Commission cannot conclude bitcoin ETP would be able to source bitcoin from an exchange and create or redeem Shares in an applicable trust regardless of the price of the underlying bitcoin. See id. at 41764.
that the Benchmark aids in the determination that the proposal to list and trade the Shares is designed to prevent fraudulent and manipulative acts and practices.110

Finally, the Commission finds that BZX has not demonstrated that in-kind creations and redemptions provide the Shares with a unique resistance to manipulation. The Commission has previously addressed similar assertions.111 As the Commission stated before, in-kind creations and redemptions are a common feature of ETPs, and the Commission has not previously relied on the in-kind creation and redemption mechanism as a basis for excusing exchanges that list ETPs from entering into surveillance-sharing agreements with significant, regulated markets related to the portfolio’s assets.112 Accordingly, the Commission is not persuaded here that the Trust’s in-kind creations and redemptions afford it a unique resistance to manipulation.113

(2) Assertions That BZX Has Entered Into a Comprehensive Surveillance-Sharing Agreement With a Regulated Market of Significant Size Related to the Underlying Bitcoin Assets

As BZX has not demonstrated that other means besides surveillance-sharing agreements will be sufficient to prevent fraudulent and manipulative acts and practices, the Commission next examines whether the record supports the conclusion that BZX has entered into a comprehensive surveillance-sharing agreement with a regulated market of significant size related to the underlying bitcoin assets. In this context, the term “market of significant size” includes a market (or group of markets) as to which (i) there is a reasonable likelihood that a person attempting to manipulate the ETP would also have to trade on that market to successfully manipulate the ETP, so that a surveillance-sharing agreement would assist in detecting and deterring misconduct, and (ii) it is unlikely that trading in the ETP would be the predominant influence on prices in that market.114

As the Commission has explained, it considers two markets that are members of the ISG to have a comprehensive surveillance-sharing agreement with one another, even if they do not have a separate bilateral surveillance-sharing agreement.115 Accordingly, based on the common membership of BZX and the CME in the ISG,116 BZX has the equivalent of a comprehensive surveillance-sharing agreement with the CME. However, while the Commission recognizes that the CFTC regulates the CME futures market,117 including the CME bitcoin futures market, and thus market is “regulated,” in the context of the proposed ETP, the record does not, as explained further below, establish that the CME bitcoin futures market is a “market of significant size” related to spot bitcoin, the underlying bitcoin assets that would be held by the Trust.

(i) Whether There Is a Reasonable Likelihood That a Person Attempting To Manipulate the ETP Would Also Have To Trade on the CME Bitcoin Futures Market To Successfully Manipulate the ETP

The first prong in establishing whether the CME bitcoin futures market constitutes a “market of significant size” related to spot bitcoin is the determination that there is a reasonable likelihood that a person attempting to manipulate the ETP would have to trade on the CME bitcoin futures market to successfully manipulate the ETP. In previous Commission orders, the Commission explained that the lead-lag relationship between the bitcoin futures market and the spot market is “central” to understanding this first prong.118

(a) BZX’s Assertions

According to the Exchange, “publicly available research, including research done as part of rule filings proposing to list and trade shares of [spot bitcoin ETPs], supports the thesis that [CME] [bitcoin] futures pricing leads the spot market and, thus, a person attempting to manipulate the Shares would also have to trade on that market to manipulate the ETP.”119 BZX asserts that “[s]uch research indicates that bitcoin futures lead the bitcoin spot market in price formation.”120 BZX asserts that CME

110 See WisdomTree Order, 86 FR at 69328; ARK 21Shares Order, 87 FR at 20022.  
111 See Winklevoss Order, 83 FR at 37589–90; USBT Order, 85 FR at 12607–08; WisdomTree Order, 86 FR at 69329; ARK 21Shares Order, 87 FR at 20022.  
113 Putting aside the Exchange’s various assertions about the nature of bitcoin and the bitcoin market, the Benchmark, and the Shares, the Exchange also does not address concerns the Commission has previously identified, including the susceptibility of bitcoin markets to potential trading on material, non-public information (such as plans of market participants to significantly increase or decrease their holdings in bitcoin; new sources of demand for bitcoin; the decision of a bitcoin-based investment vehicle on how to respond to a “fork” in the bitcoin blockchain, which reflects different, non-interchangeable types of bitcoin), or to the dissemination of false or misleading information. See Winklevoss Order, 83 FR at 37585. See also USBT Order, 85 FR at 12600–01.  
114 See Winklevoss Order, 83 FR at 37594.  
115 See id. at 37590 n.19.  
116 See Notice, 87 FR at 41763.  
117 While the Commission recognizes that the CFTC regulates the CME, the CFTC is not responsible for direct, comprehensive regulation of CME futures market,117 including the CME bitcoin futures market, and thus market is “regulated.” In the context of the proposed ETP, the record does not, as explained further below, establish that the CME bitcoin futures market is a “market of significant size” related to spot bitcoin, the underlying bitcoin assets that would be held by the Trust.  
118 See, e.g., USBT Order, 85 FR at 12612 (“[E]stablishing a lead-lag relationship between the bitcoin futures market and the bitcoin spot market is central to understanding whether it is reasonably likely that a would-be manipulator of the ETP would need to trade on the bitcoin futures market to successfully manipulate prices on those spot platforms that feed into the proposed ETP’s pricing mechanism. In particular, if the spot market leads the futures market, this would indicate that it would not be necessary to trade on the futures market to manipulate the proposed ETP, even if arbitrage worked efficiently, because the futures price would move to meet the spot price.”). When considering past proposals for spot bitcoin ETPs, the Commission has discussed whether there is a lead-lag relationship between the regulated market (e.g., the CME) and the market on which the assets held by the ETP would have traded (e.g., the bitcoin spot market), as part of an analysis of whether a would-be manipulator of the spot bitcoin ETP would need to trade on the regulated market to effect such manipulation. See, e.g., USBT Order, 85 FR at 12612. See also Previous VanEck Order, 86 FR at 64547; WisdomTree Order, 86 FR at 69330–31; Kryptoin Order, 86 FR at 74175–76; SkyBridge Order, 87 FR at 3875–76; Wise Origin Order, 87 FR at 5535–36, 5539–40; ARK 21Shares Order, 87 FR at 20023–24; Bitwise Order, 87 FR at 40287–89; Grayscale Order, 87 FR at 40211–13.  
119 See Notice, 87 FR at 41762.  
120 See id. at 41762–63 and n.51 (citing to (a) the Wise Order; Notice of Filing of a Proposed Rule Change To List and Trade Shares of the ARK 21Shares Order, 86 FR 69330–31 (Nov. 3, 2021) (SR–NYSEArca–2021–90) (‘‘Grayscale Order’’); and (b) Hu, Y., Hou, Y. and Oxley, L. (2019), ‘‘What role do futures markets play in Bitcoin pricing? Cross-market integration and price discovery from a time-varying perspective’’ (available at: https://www.ncbi.nlm.nih.gov/pmc/articles/PMC7401626/) (‘‘Hu, Hou & Oxley’’)). The Exchange acknowledges the differences in its analysis from the ‘‘time-varying price discovery’’ section of Hu, Hou & Oxley: “There exist no episodes where the Bitcoin spot markets dominates the price discovery processes with regard to Bitcoin futures. This points
Bitcoin futures “represent a growing influence on pricing in the spot bitcoin market as has been laid out... in previous proposals to list and trade [spot] bitcoin ETPs.”

(b) Analysis

The record does not demonstrate that there is a reasonable likelihood that a person attempting to manipulate the proposed ETP would have to trade on the CME bitcoin futures market to successfully manipulate the proposed ETP. First, ex post evidence is not relevant to whether the Commission has previously raised with respect to this single proposal.

As the Commission to a conclusion that the price formation originates solely in the futures markets. We can, therefore, conclude that the Bitcoin futures markets dominate the dynamic price discovery process based upon time-varying information share measures. Overall, price discovery seems to occur in the Bitcoin futures markets rather than the underlying spot market based upon a time-varying perspective. See id. at 41763 n.51.

In addition, the Exchange asserts that pricing in CME bitcoin futures “is based on pricing from spot bitcoin markets.” See id. at 41763. The Exchange argues that a statement in the Commission’s prior approval of CME bitcoin futures ETPs “makes clear that the Commission believes that CME’s surveillance can capture the effects of trading on the relevant spot markets on the pricing of CME bitcoin futures.” See supra note 120. The Exchange further states that if CME’s surveillance is sufficient to mitigate concerns related to trading in CME bitcoin futures “for which the pricing is based directly on pricing from spot bitcoin markets, it’s not clear how such a conclusion could apply only to ETPs based on [CME] bitcoin futures and not extend to [spot] bitcoin ETPs.” See id. at 41763-64. Moreover, BZX argues that CME bitcoin futures ETPs may be more susceptible to potential manipulation than a spot bitcoin ETP that offers only in-kind creation and redemption, and potential manipulation of a CME bitcoin futures ETP would require manipulation on the spot markets on which the pricing for CME bitcoin futures is based. See id. at 41764. Because these assertions relate more generally to whether the CME bitcoin futures market constitutes a “market of significant size” related to spot bitcoin and do not relate specifically to the first prong, the Commission responds to these assertions in Section III.B infra.

In previous disapprovals, because the lead-lag analysis regarding whether the CME bitcoin futures market leads the spot market is “central” to understanding the first prong, the Commission determines that the evidence in the record is inadequate to conclude that an interrelationship exists between the CME bitcoin futures market and the spot bitcoin market such that it is reasonably likely that a person attempting to manipulate the proposed ETP would have to trade on the CME bitcoin futures market to successfully manipulate the proposed ETP.

The Commission thus concludes that the information that BZX provides is not sufficient to support a determination that it is reasonably likely that a would-be manipulator of the proposed ETP would have to trade on the CME bitcoin futures market to successfully manipulate the proposed ETP.

Therefore, the information in the record also does not establish that the CME bitcoin futures market constitutes a “market of significant size” related to the assets to be held by the proposed ETP.

(ii) Whether It Is Unlikely That Trading in the Proposed ETP Would Be the Predominant Influence on Prices in the CME Bitcoin Futures Market

The second prong in establishing whether the CME bitcoin futures market constitutes a “market of significant size” related to spot bitcoin is the determination that it is unlikely that trading in the proposed ETP would be the predominant influence on prices in the CME bitcoin futures market.

(a) BZX’s Assertions

BZX asserts that trading in the Shares would not be the predominant force on prices in the CME bitcoin futures market or (spot market) because of the in-kind creation and redemption process, the spot market arbitrage opportunities that...
such in-kind creation and redemption process creates, the significant volume in the CME bitcoin futures market,\textsuperscript{132} the size of bitcoin’s market capitalization,\textsuperscript{133} and the significant liquidity available in the spot market.\textsuperscript{134} BZX further provides that the cost to buy or sell $5 million worth of bitcoin averages roughly 48 basis points with a market impact of $139.08.\textsuperscript{135} According to the Exchange, “[s]tated another way, a market participant could enter a market buy or sell order for $5 million of bitcoin and only move the market 0.48%.”\textsuperscript{136} BZX further asserts that more strategic purchases or sales (such as using limit orders and executing through over-the-counter (“OTC”)) bitcoin trade desks) would likely have less obvious impact on the market, which is consistent with MicroStrategy, Tesla, and Square being able to collectively purchase billions of dollars in bitcoin.\textsuperscript{137} Thus, BZX concludes that the combination of in-kind creation and redemption process, the CME bitcoin futures leading price discovery, the overall size of the bitcoin market, and the ability for market participants, including authorized participants creating and redeeming in-kind with the Trust, to buy or sell large amounts of bitcoin without significant market impact, will help prevent the Shares from becoming the predominant force on pricing in either the spot bitcoin or the CME bitcoin futures market.\textsuperscript{138}

(b) Analysis

The Commission does not agree with BZX’s assertions, which are similar to the assertions that BZX made, and the Commission discussed, in the Previous VanEck Order. Now, as then, the record does not demonstrate that it is unlikely that trading in the proposed ETP would be the predominant influence on prices in the CME bitcoin futures market. As the Commission has already addressed and rejected one of the bases of BZX’s assertion—that CME bitcoin futures lead price discovery\textsuperscript{139}—the Commission will only address below the other three bases: the in-kind create/redeem mechanism and arbitrage, and the overall size of the CME bitcoin futures market on a daily basis, and approximately $1.3 billion in notional trading volume in CME bitcoin futures on a daily basis, and notional volume was never below $670 million. See id. Additionally, BZX states that open interest was over $2 billion for the entirety of such period, and at one point was over $3 billion. See id. at 41758. BZX further states that the number of large interest holders and unique accounts trading CME bitcoin futures have both increased, even in the face of heightened spot bitcoin price volatility. See id. at 41762. According to BZX, a large open interest holder in CME bitcoin futures is an entity that holds at least 25 contracts, which is the equivalent of 125 bitcoin, and, at a price of approximately $38,605 per bitcoin on April 30, 2022, more than 80 firms had outstanding positions of greater than $4.8 million in CME bitcoin futures. See id. at 41762 n.50.

According to BZX, as of December 1, 2021, the total market cap of all $11.4 billion in contracts was approximately $1.08 trillion. See id. at 41757 n.24. See id. at 41764.

According to BZX, these statistics are based on samples of bitcoin liquidity in U.S. dollars (excluding stablecoins or Euro liquidity) based on executable quotes on Coinbase, FTX and Kraken during the one year period ending May 2022. See id. at 41764 n.59. See id. at 41764.

The Commission also is not persuaded by BZX’s assertions about the minimal effect a market order to buy or sell bitcoin would have on the bitcoin market.\textsuperscript{141} While BZX concludes by way of an example of a $5 million market order that buying or selling large amounts of bitcoin would have insignificant market impact, the conclusion does not analyze the extent of any impact on the CME bitcoin futures market or the CME bitcoin futures market’s prices. Accordingly, such statistics, without more, are not relevant to the Commission’s consideration of whether trading in the ETP would be the predominant influence on prices in the CME bitcoin futures market.

To the extent that BZX is suggesting that a single $5 million order in bitcoin would have immaterial impact on the prices in the CME bitcoin futures market, the Exchange has not adequately explained why a single market order in spot bitcoin is an appropriate proxy for trading in the Shares. As stated above, the second prong in establishing whether the CME bitcoin futures market constitutes a “market of significant size” is the determination that it is unlikely that trading in the proposed ETP would be

\textsuperscript{132} BZX states that the CME began to offer trading in bitcoin futures in 2017. See Notice, 87 FR at 41761. According to BZX, nearly every measurable metric related to CME bitcoin futures contracts, which trade and settle like other cash-settled commodity futures contracts, has “generally trended up since launch, although certain notional volume calculations have decreased roughly in line with the decrease in the price of bitcoin.” See id. For example, according to BZX, there were 219,089 CME bitcoin futures contracts traded in April 2022 (approximately $31.2 billion) compared to 89,852 (approximately $31.2 billion) compared to 89,852 ($55.8 billion) contracts traded in April 2019, April 2020, and April 2021, respectively. Additionally, BZX states that open interest was over $2 billion for the entirety of such period, and at one point was over $3 billion. See id. at 41758. BZX further states that the number of large interest holders and unique accounts trading CME bitcoin futures have both increased, even in the face of heightened spot bitcoin price volatility. See id. at 41762. According to BZX, a large open interest holder in CME bitcoin futures is an entity that holds at least 25 contracts, which is the equivalent of 125 bitcoin, and, at a price of approximately $38,605 per bitcoin on April 30, 2022, more than 80 firms had outstanding positions of greater than $4.8 million in CME bitcoin futures. See id. at 41762 n.50.

\textsuperscript{133} See supra Section III.B.2.i.b.\textsuperscript{134} As discussed above, the Exchange has presented no evidence or analysis to support its assertions regarding the presence of price arbitrage in the spot bitcoin market. See supra notes 57–62 and accompanying text. Also as discussed above, the Trust’s in-kind creation and redemption processes do not afford it a unique advantage over other cash-settled ETPs. See supra notes 57–62 and accompanying text. Also as discussed above, the Trust’s in-kind creation and redemption processes do not afford it a unique advantage over other cash-settled ETPs. See supra notes 57–62 and accompanying text.\textsuperscript{135} According to BZX, as of December 1, 2021, the total market cap of all $11.4 billion in contracts was approximately $1.08 trillion. See id. at 41757 n.24. See id. at 41764.

\textsuperscript{136} See id.

\textsuperscript{137} See id.

\textsuperscript{138} See supra Section III.B.2.i.b.

\textsuperscript{139} As discussed above, the Exchange has presented no evidence or analysis to support its assertions regarding the presence of price arbitrage in the spot bitcoin market. See supra notes 57–62 and accompanying text. Also as discussed above, the Trust’s in-kind creation and redemption processes do not afford it a unique advantage over other cash-settled ETPs. See supra notes 57–62 and accompanying text. Also as discussed above, the Trust’s in-kind creation and redemption processes do not afford it a unique advantage over other cash-settled ETPs. See supra notes 57–62 and accompanying text.

\textsuperscript{140} See Previous VanEck Order, 86 FR at 64548–59; WisdomTree Order, 86 FR at 69332–33; Kryptoin Order, 86 FR at 74177; Global X Order, 87 FR at 3879; Wise Origin Order, 87 FR at 5537; ARK 21Shares Order, 87 FR at 20025; Global X Order, 87 FR at 14921.

\textsuperscript{141} See Notice, 87 FR at 41764 (“[T]he cost to buy or sell $5 million worth of bitcoin averages roughly 48 basis points with a market impact of $139.08. Stated another way, a market participant could enter a market buy or sell order for $5 million of bitcoin and only move the market 0.48%.”).
the predominant influence on prices in the CME bitcoin futures market. While authorized participants of the Trust might transact in the spot bitcoin market as part of their creation or redemption of Shares, the Shares themselves would be traded in the secondary market on BZX. Furthermore, the record does not discuss the expected number or trading volume of the Shares, or establish the potential effect of the Shares’ trade prices on CME bitcoin futures prices. For example, BZX does not provide any data or analysis about the potential effect the quotations or trade prices of the Shares might have on market-maker quotations in CME bitcoin futures contracts and whether those effects would constitute a predominant influence on the prices of those futures contracts.143

Thus, the Commission cannot conclude, based on the assertions in the filing and absent sufficient evidence or analysis in support of these assertions, that it is unlikely that trading in the proposed ETP would be the predominant influence on prices in the CME bitcoin futures market.

Therefore, because BZX has not provided sufficient information to establish both prongs of the “market of significant size” determination, the Commission cannot conclude that the CME bitcoin futures market is a “market of significant size” related to spot bitcoin such that BZX would be able to rely on a surveillance-sharing agreement with the CME to provide sufficient protection against fraudulent and manipulative acts and practices.

(ii) Analysis

The Commission disagrees with these assertions and conclusions. The proposed rule change does not relate to the same underlying holdings as ETPs that provide exposure to bitcoin through CME bitcoin futures, or CME bitcoin futures-based ETPs. The Commission considers the proposed rule change on its own merits and under the standards applicable to it. Namely, with respect to this proposed rule change, the Commission must apply the standards as provided by Section 6(b)(5) of the Exchange Act, which it has applied in connection with its orders considering previous proposals to list bitcoin-based commodity trusts and bitcoin-based trust issued receipts.153

In focusing on whether “concerns related to preventing fraudulent and manipulative acts and practices” would constitute a predominant influence on the prices of those futures contracts, BZX interprets the Commission’s prior approval of CME bitcoin futures ETFs as making clear that the Commission believes that CME’s surveillance can capture the effects of trading on the relevant spot markets on the pricing of CME [b]itcoin [futures].”146 The Exchange argues that “given that there is significant trading volume on numerous bitcoin exchanges that are not part of the CME CF Bitcoin Reference Rate and that arbitrage opportunities across bitcoin exchanges means that such trading volume will influence spot bitcoin prices across the market,” the Commission’s belief that CME “can detect attempted manipulation of the [CME] [b]itcoin [futures] through ‘trading outside of the CME bitcoin futures market’” means that “such ability would apply equally to both [CME] [b]itcoin [futures] ETFs and [spot] [b]itcoin ETPs.”147 The Exchange further concludes, “such an ability would also seem to be a strong indication that the CME [b]itcoin [futures] market represents a regulated market of significant size.”148 BZX states that if CME’s surveillance is sufficient to mitigate concerns related to trading in CME bitcoin futures “for which the pricing is based directly on pricing from spot bitcoin markets, it’s not clear how such a conclusion could apply only to ETPs based on [CME] [b]itcoin [futures] and not to [spot] [b]itcoin ETPs.”149 BZX asserts that, after approving the listing and trading of CME bitcoin futures ETPs, wherein the Commission concluded that the CME bitcoin futures market is a regulated market of significant size as it relates to CME bitcoin futures, the only consistent outcome would be to approve spot bitcoin ETPs on the basis that the CME bitcoin futures market is also a regulated market of significant size as it relates to the spot bitcoin market.150

BZX also argues that CME bitcoin futures ETPs may be more susceptible to potential manipulation than a spot bitcoin ETP that offers only in-kind creation and redemption because of the underlying creation and redemption arbitrage mechanism.151 BZX asserts that any objective review of the proposals to list spot bitcoin ETPs compared to the CME bitcoin futures ETFs and ETPs would lead to the conclusion that spot bitcoin ETFs should be available to U.S. investors because “any concerns related to preventing fraudulent and manipulative acts and practices related to [spot] [b]itcoin ETPs would apply equally to the spot markets underlying the futures contracts held by a [CME] [b]itcoin [futures] ETF.”152

(iii) Analysis

The Commission disagrees with these assertions and conclusions. The proposed rule change does not relate to the same underlying holdings as ETPs that provide exposure to bitcoin through CME bitcoin futures, or CME bitcoin futures-based ETPs. The Commission considers the proposed rule change on its own merits and under the standards applicable to it. Namely, with respect to this proposed rule change, the Commission must apply the standards as provided by Section 6(b)(5) of the Exchange Act, which it has applied in connection with its orders considering previous proposals to list bitcoin-based commodity trusts and bitcoin-based trust issued receipts.153

In focusing on whether “concerns related to preventing fraudulent and

150 See supra note 11 and accompanying text.
manipulative acts and practices related to [spot] bitcoin ETPs would apply equally to the spot markets underlying the futures contracts held by [a [CME] [bitcoin] futures ETF].” The Exchange mischaracterizes the framework that the Commission has articulated in the Winklevoss Order. As stated in the Winklevoss Order, the Commission is not applying a “cannot be manipulated” approach—either on the CME bitcoin futures market or the spot bitcoin markets. Rather, as the Commission has repeatedly emphasized, and also summarized above, the Commission is examining whether the proposal meets the requirements of the Exchange Act and, pursuant to the Rules of Practice, the burden is on BZX to demonstrate the validity of its contention that other means to prevent fraudulent and manipulative acts and practices are sufficient to justify dispensing with the detection and deterrence of fraud and manipulation provided by a comprehensive surveillance-sharing agreement with a regulated market of significant size related to spot bitcoin, or to establish that it has entered into such a surveillance-sharing agreement.

Consistent with this approach, the Commission’s consideration (and thus far, disapproval) of proposals to list and trade spot bitcoin ETPs does not focus on an assessment of the overall risk of fraud and manipulation in the spot bitcoin or futures markets, or on the extent to which such risks are similar. Rather, the Commission’s focus has been consistently on whether the listing exchange has a comprehensive surveillance-sharing agreement with a regulated market of significant size related to the underlying bitcoin assets of the ETP under consideration, so that it would have the ability to detect and deter manipulative activity. For reasons articulated in the orders approving proposals to list and trade CME bitcoin futures-based ETPs (i.e., the Teucrium Order and the Valkyrie XBTO Order), the Commission found that in each such case the listing exchange has entered into such a surveillance-sharing agreement.

Applying the same framework to this proposed spot bitcoin ETP, however, as discussed and explained above, the Commission finds that BZX has not. Moreover, for the CME bitcoin futures ETPs under consideration in the Teucrium Order and the Valkyrie XBTO Order, the proposed “significant” regulated market (i.e., the CME) with which the listing exchange has a surveillance-sharing agreement is the same market on which the underlying bitcoin assets (i.e., CME bitcoin futures contracts) trade. Thus, the CME’s surveillance can reasonably be relied upon to detect and deter manipulative activity caused by a person attempting to manipulate the CME bitcoin futures ETP through directly trading on the CME bitcoin futures market. Additionally, as explained in the Teucrium Order and the Valkyrie XBTO Orders, the CME’s surveillance can also reasonably be relied upon to capture the effects on the CME bitcoin futures market caused by a person attempting to manipulate the CME bitcoin futures ETP by manipulating the price of CME bitcoin futures contracts when that attempt is made indirectly by trading outside of the CME bitcoin futures market. Regarding the approved Teucrium Bitcoin Futures Fund in the Teucrium Order (“Teucrium Fund”), for example, when the CME shares its surveillance information with the listing exchange, the information would assist in detecting and deterring fraudulent or manipulative misconduct related to the non-cash assets held by the Teucrium Fund. Accordingly, the Commission explains in the Teucrium Order and the Valkyrie XBTO Order that it is unnecessary for a listing exchange to establish a reasonable likelihood that a would-be manipulator would have to trade on the CME itself to manipulate a proposed ETP whose only non-cash holdings would be CME bitcoin futures contracts.

However, as the Commission also states in those Orders, this reasoning does not extend to spot bitcoin ETPs. Spot bitcoin markets are not currently “regulated.” If an exchange seeking to list a spot bitcoin ETP relies on the CME as the regulated market with which it has a comprehensive surveillance-sharing agreement, the assets held by the spot bitcoin ETP would not be traded on the CME. Because of this significant difference, with respect to a spot bitcoin ETP, there would be reason to question whether a surveillance-sharing agreement with the CME would, in fact, assist in detecting and deterring fraudulent and manipulative misconduct affecting the price of the spot bitcoin held by that ETP. If, however, an exchange proposing to list and trade a spot bitcoin ETP identifies the CME as the regulated market with which it has a comprehensive surveillance-sharing agreement, the exchange could overcome the Commission’s concern by demonstrating that there is a reasonable likelihood that a person attempting to manipulate the spot bitcoin ETP would have to trade on the CME in order to manipulate the ETP, because such demonstration would help establish that the exchange’s surveillance-sharing agreement with the CME would have the intended effect of aiding in the detection and deterrence of fraudulent and manipulative misconduct related to the spot bitcoin held by the ETP.

Because, here, BZX is seeking to list a spot bitcoin ETP that relies on the CME as the purported “significant” regulated market with which it has a comprehensive surveillance-sharing agreement, the assets held by the proposed ETP would not be traded on the CME. Thus, there is reason to question whether a surveillance-sharing agreement with the CME would, in fact, assist in detecting and deterring fraudulent and manipulative misconduct affecting the price of the spot bitcoin held by the proposed ETP. An exchange can overcome this
concern by demonstrating that there is a reasonable likelihood that a person attempting to manipulate the proposed ETP would have to trade on the CME in order to manipulate the ETP because such demonstration would help establish that an exchange’s surveillance-sharing agreement with the CME would have the intended effect of aiding in the detection and deterrence of fraudulent and manipulative misconduct related to the spot bitcoin held by the proposed ETP.164 As discussed and explained above,165 the Commission finds that BZX has not made such demonstration.

To the extent that the Exchange is arguing that the CME’s surveillance would, in fact, assist in detecting and deterring fraudulent and manipulative misconduct that impacts spot bitcoin ETPs in the same way as it would for misconduct that impacts the CME bitcoin futures contracts, the information in the record for this filing does not support such a claim.

BZX asserts that CME bitcoin futures pricing “is based on pricing from spot bitcoin markets” and that “the pricing mechanism applicable to the Shares is similar to the CME CF Bitcoin Reference Rate.”166 However, the Exchange provides no evidence or data to support the assertion that CME bitcoin futures pricing “is based on” pricing from spot bitcoin markets. Moreover, if, as the Exchange claims here in the context of its arbitrary/capricious argument, CME bitcoin futures prices are “based on” spot bitcoin prices, the Exchange does not explain how this is consistent with, and indeed how it does not contradict, the Exchange’s claims in the context of its “significant market” arguments that market (i.e., its own market) caused by a person attempting to manipulate the CME bitcoin futures ETP by manipulating the price of CME bitcoin futures contracts, whether that attempt is made by directly trading on the CME bitcoin futures market or indirectly by trading outside of the CME bitcoin futures market. See Teucrium Order, 87 FR at 21679. Importantly, the Commission did not state that, for spot bitcoin ETPs such as the one proposed here, where the underlying asset would not trade on the CME, the CME’s surveillance can similarly be relied upon for the effects of a person attempting to manipulate a spot bitcoin ETP by manipulating the price of spot bitcoin when the attempt is made by trading outside of the CME bitcoin futures market. Indeed, there is reason to question whether the CME’s surveillance would capture manipulation of spot bitcoin that occurs off of the CME, if, for example, off-CME manipulation of spot bitcoin does not also similarly impact CME bitcoin futures contracts. And, as discussed below, the Exchange has not provided any data or analysis to show that CME bitcoin futures would be impacted by instances of fraud and manipulation in the spot bitcoin market that occurs off of the CME.167

16069 Federal Register / Vol. 88, No. 50 / Wednesday, March 15, 2023 / Notices

CME bitcoin futures prices “lead” spot bitcoin prices. In addition, to the extent that the Exchange is asserting that CME bitcoin futures pricing “is based on” spot bitcoin pricing because of the BRR, this is also not supported by the evidence in the record for this proposal. While the BRR is used to value the final cash settlement of CME bitcoin futures contracts, it is not generally used for daily cash settlement of such contracts, nor is it claimed to be used for any intra-day trading of such contracts.167 Moreover, the shares of CME bitcoin futures ETFs/ETPs trade in secondary markets, as would the Shares, and there is no evidence in the record for this filing that such intra-day, secondary market trading prices are, or would be, determined by the BRR. Further, the Commission’s determination in the Teucrium Order and the Valkyrie XBTO Order to approve the listing and trading of the relevant CME bitcoin futures ETFs/ETPs was not based on either the ETPs or the underlying CME bitcoin futures contracts’ pricing mechanism. Rather, as discussed above, the Commission approved the listing and trading of such CME bitcoin futures ETFs because the Commission found that the listing exchanges have a surveillance-sharing agreement with a regulated market of significant size related to the underlying bitcoin assets—which for such ETPs are CME bitcoin futures contracts, not spot bitcoin.

Moreover, even if the Exchange had demonstrated a connection between spot bitcoin prices and CME bitcoin futures prices, which it has not, it does not necessarily follow that the CME’s surveillance would, in fact, assist in detecting and deterring fraudulent and manipulative misconduct that impacts spot bitcoin ETPs in the same way as it would for misconduct that impacts the CME bitcoin futures contracts.168 This is because it does not—absent supporting data—necessarily follow that any manipulation that impacts spot bitcoin also similarly impacts CME bitcoin futures contracts. The Exchange has not provided analysis or data that assesses the reaction (if any) of CME bitcoin futures contracts to instances of fraud and manipulation in spot bitcoin markets.

In addition, for the reasons discussed throughout this order, the disapproval of the proposal would not constitute an “arbitrary and capricious” administrative action in violation of the Administrative Procedure Act.169 Importantly, the issuers are not similarly situated. The issuers of CME bitcoin futures-based ETFs/ETPs propose to hold only CME bitcoin futures contracts (which are traded on the CME itself) as their only non-cash holdings, and the Trust proposes to hold only spot bitcoin (which is not traded on the CME). As explained in detail above, and in the Teucrium Order, the Valkyrie XBTO Order, and the Grayscale Order, because of this important difference, for a spot bitcoin ETP, there is reason to question whether a surveillance-sharing agreement with the CME would, in fact, assist in detecting and deterring fraudulent and manipulative misconduct affecting the price of the spot bitcoin held by that ETP.170 And as discussed above, neither the Exchange nor any other evidence in the record for this filing, sufficiently demonstrates that the CME’s surveillance can be reasonably relied upon to capture the effects of manipulation of the spot bitcoin assets underlying the proposed ETP when such manipulation is not attempted on the CME itself.

Moreover, the analytical framework for assessing compliance with the requirements of Exchange Act Section 6(b)(5) that the Commission applies here (i.e., comprehensive surveillance-sharing agreement with a regulated market of significant size related to the underlying bitcoin assets) is the same one that the Commission has applied in each of its orders considering previous proposals to list bitcoin-based commodity trusts and trust issued receipts.171 The Commission has applied this framework to each proposal by analyzing the evidence presented by the listing exchange and statements made by commenters.172 Exchange Act Section 6(b)(5) can be satisfied by a proper showing; the Commission has in fact recently approved proposals by NYSE Arca, Inc. and the Nasdaq Stock Market to list and trade shares of ETPs holding CME bitcoin futures as their

164 The Commission is disapproving this proposed rule change because BZX has not met its burden to demonstrate that its proposal is consistent with the requirements of Exchange Act Section 6(b)(5). The Commission’s disapproval of this proposed rule change does not rest on an evaluation of the relative investment quality of a product holding spot bitcoin versus a product holding CME bitcoin futures, or an assessment of whether bitcoin, or blockchain technology more generally, has utility or value as an innovation or an investment. See, e.g., Winklevoss Order, 83 FR at 37580; USBT Order, 85 FR at 12597; One River Order, 87 FR at 33550; Grayscale Order, 87 FR at 40318 n.227.
165 See supra note 163 and accompanying text.
166 See supra notes 11–24 and accompanying text.
167 See supra note 11.
only non-cash holdings. In the orders approving the CME bitcoin futures-based ETPs, the Commission explicitly discussed how an exchange seeking to list and trade a spot bitcoin ETF could overcome the lack of a one-to-one relationship between the regulated market with which it has a surveillance-sharing agreement and the market(s) on which the assets held by a spot bitcoin ETF could be traded: by demonstrating that there is a reasonable likelihood that a person attempting to manipulate the spot bitcoin ETF would have to trade the regulated market (i.e., on the CME) to manipulate the spot bitcoin ETF.

When considering past proposals for spot bitcoin ETPs, the Commission has, in particular, reviewed the econometric and/or statistical evidence in the record to determine whether the listing exchange’s proposal has met the applicable standard. The Commission’s assessment fundamentally presents quantitative, empirical questions, but, as discussed above, the exchange has not provided evidence sufficient to support its arguments.

The requirements of Section 6(b)(5) of the Exchange Act apply to the rules of national securities exchanges. Accordingly, the relevant obligation to have a comprehensive surveillance-sharing agreement with a regulated market of significant size related to spot bitcoin, or other means to prevent fraudulent and manipulative acts and practices that are sufficient to justify dispensing with such a surveillance-sharing agreement, resides with the listing exchange. Because there is insufficient evidence in the record demonstrating that BZX has satisfied this obligation, the Commission cannot approve the proposed ETP for listing and trading on BZX.

C. Whether BZX Has Met Its Burden To Demonstrate That the Proposal Is Designed To Protect Investors and the Public Interest

BZX contends that, if approved, the proposed ETP would protect investors and the public interest. However, the Commission must consider these potential benefits in the broader context of whether the proposal meets each of the applicable requirements of the Exchange Act. Because BZX has not demonstrated that its proposed rule change is designed to prevent fraudulent and manipulative acts and practices, the Commission must disapprove the proposal.

(1) BZX’s Assertions

The Exchange states that the proposal is designed to protect investors and the public interest. BZX asserts that access for U.S. retail investors to gain exposure to bitcoin via a transparent and U.S.-regulated, exchange-traded vehicle remains limited. According to the Exchange, current options include: (i) OTC bitcoin funds with high management fees and potentially volatile premiums and discounts; (ii) facing the technical risk, complexity, and generally high fees associated with buying spot bitcoin; (iii) purchasing shares of operating companies that they believe will provide proxy exposure to bitcoin with limited disclosure about the associated risks; or (iv) purchasing CME bitcoin futures ETPs that represent a sub-optimal investment for long-term investors.

BZX also states that investors in many other countries, including Canada and Brazil, are able to use more traditional exchange-listed and traded products (including exchange-traded vehicles holding spot bitcoin) to gain exposure to bitcoin, disadvantaging U.S. investors and leaving them with more risky means of getting bitcoin exposure. BZX concludes that its proposal limits the risk to U.S. investors that are increasingly seeking exposure to bitcoin by providing direct exposure to bitcoin in a regulated, transparent, U.S. exchange-traded vehicle, by: (i) reducing premium volatility; (ii) reducing management fees through meaningful competition; (iii) providing an alternative to CME bitcoin futures ETPs; (iv) reducing risks associated with investing in operating companies that are imperfect proxies for bitcoin exposure; and (v) providing an alternative to custodying spot bitcoin.

(2) Analysis

The Commission disagrees that the proposal should be approved because it is not designed to protect investors and the public interest. Here, even if it were true that, compared to trading in unregulated spot bitcoin markets or OTC bitcoin

177 See Winklevoss Order, 83 FR at 74709. The Exchange asserts that, as a result of rolling CME bitcoin futures contracts and also potentially hitting CME position limits and being forced to invest in non-futures assets for bitcoin exposure, CME bitcoin futures ETFs would “unnecessarily cost U.S. investors significant amounts of money every year compared to [spot bitcoin] ETPs” and the proposed rule change “should be reviewed by the Commission with this important investor protection context in mind.” See id. at 41760.

178 See id. at 41759. BZX represents that investors in other countries, specifically Canada, generally pay lower fees than U.S. retail investors that invest in OTC bitcoin funds due to the fee pressure that results from increased competition among available bitcoin investment options. BZX also argues that, without an approved spot bitcoin ETF in the U.S. as a viable alternative, U.S. investors could seek to purchase shares of non-U.S. bitcoin vehicles in order to gain access to bitcoin exposure. BZX believes that, given the separate regulatory regime and the potential difficulties associated with any international litigation, such an arrangement would create more risk exposure for U.S. investors than they would otherwise have with a U.S. exchange-listed ETP. BZX further contends that a lack of a U.S-listed spot bitcoin ETF is not preventing U.S. funds from gaining exposure to bitcoin—several U.S. ETFs are using Canadian bitcoin ETFs to gain exposure to spot bitcoin—and that approving this proposal “would provide U.S. [ETFs] and mutual funds with a U.S-listed and regulated product to provide such access rather than relying on either flawed products or products associated with limited exposure to bitcoin and are not fully benefitting from the risk disclosures and associated investor protections that come from the securities registration process.” See id. at 41759 n.39, 41760–61.

188 See id. at 41759–59. The Exchange asserts that, as a result of rolling CME bitcoin futures contracts and also potentially hitting CME position limits and being forced to invest in non-futures assets for bitcoin exposure, CME bitcoin futures ETFs will “unnecessarily cost U.S. investors significant amounts of money every year compared to [spot bitcoin] ETPs” and the proposed rule change “should be reviewed by the Commission with this important investor protection context in mind.” See id. at 41760.

189 See id. at 41759. BZX represents that investors in other countries, specifically Canada, generally pay lower fees than U.S. retail investors that invest in OTC bitcoin funds due to the fee pressure that results from increased competition among available bitcoin investment options. BZX also argues that, without an approved spot bitcoin ETF in the U.S. as a viable alternative, U.S. investors could seek to purchase shares of non-U.S. bitcoin vehicles in order to gain access to bitcoin exposure. BZX believes that, given the separate regulatory regime and the potential difficulties associated with any international litigation, such an arrangement would create more risk exposure for U.S. investors than they would otherwise have with a U.S. exchange-listed ETP. BZX further contends that a lack of a U.S-listed spot bitcoin ETF is not preventing U.S. funds from gaining exposure to bitcoin—several U.S. ETFs are using Canadian bitcoin ETFs to gain exposure to spot bitcoin—and that approving this proposal “would provide U.S. [ETFs] and mutual funds with a U.S-listed and regulated product to provide such access rather than relying on either flawed products or products associated with limited exposure to bitcoin and are not fully benefitting from the risk disclosures and associated investor protections that come from the securities registration process.” See id. at 41759 n.39, 41760–61.
funds, trading a spot bitcoin-based ETP on a national securities exchange could provide some additional protection to investors, or that the Shares would provide more efficient exposure to bitcoin than other products on the market such as CME bitcoin futures ETPs/ETPs, the Commission must consider this potential benefit in the broader context of whether the proposal meets each of the applicable requirements of the Exchange Act.\(^{185}\) Pursuant to Section 19(b)(2) of the Exchange Act, the Commission must approve a proposed rule change filed by a national securities exchange if it finds that the proposed rule change is consistent with the applicable requirements of the Exchange Act—including the requirement under Section 6(b)(5) that the rules of a national securities exchange be designed to prevent fraudulent and manipulative acts and practices—and it must disapprove the filing if it does not make such a finding.\(^{186}\) Thus, even if a proposed rule change purports to protect investors from a particular type of investment risk—such as experiencing a potentially high premium/discount by investing in OTC bitcoin funds or roll costs by investing in bitcoin futures ETFs/ETPs—or purports to provide benefits to investors and the public interest—such as enhancing competition—the proposed rule change may still fail to meet the requirements under the Exchange Act.\(^{187}\)

For the reasons discussed above, BZX has not met its burden of demonstrating that the proposal is consistent with Exchange Act Section 6(b)(5),\(^{188}\) and, accordingly, the Commission must disapprove the proposal.\(^{189}\)

IV. Conclusion

For the reasons set forth above, the Commission does not find, pursuant to Section 19(b)(2) of the Exchange Act, that the proposed rule change is consistent with the requirements of the Exchange Act and the rules and regulations thereunder applicable to a national securities exchange, and in particular, with Section 6(b)(5) of the Exchange Act.

It Is Therefore Ordered, pursuant to Section 19(b)(2) of the Exchange Act, that proposed rule change SR–CboeBZX–2022–035 be, and it hereby is, disapproved.

By the Commission.

J. Matthew DeLesDernier, Deputy Secretary.
